General information

ATEX Directives 94/9/EC ("95") and 1999/92/EC ("137")

ATEX Directives harmonize the safety rules in respect with the free trading principles of the European Community.

The responsibilities are split in two areas between the manufacturers and the end users. The manufacturers have to comply with the 'Essential Health and Safety Requirements' of the Products Directive 94/9/EC, or ATEX 95; and the end users must proceed to make an Explosion Protection Document based on risks assessment of their 'work places' and 'work equipment' to fulfil the 'minimum requirements' listed in the Worker Protection Directive 1999/92/EC or ATEX 137.

Motors comply fully with the ATEX product directive 94/9/EC.

According to the regulations, low voltage motors for explosive atmospheres are exempted from the Low Voltage Directive, the EMC directive as well as the Machinery Directive.

IECEx System

The IECEx (International Electrotechnical Commission) System is a certification system which verifies compliance with IEC international standards relating to safety in explosive atmospheres. It covers equipment, service facilities and the competency of personnel.

Created in September 1999, the System aims "to facilitate international trade in equipment and services for use in explosive atmospheres, while maintaining the required level of safety..." (source: IECEx website, www.iecex.com). It is a voluntary system which provides an internationally accepted means of proving that products and services are in compliance with IEC standards. The voluntary and international aspects of the IECEx System differentiate it from certification under ATEX, for example, which is mandatory but applies only within the European Economic Area.

The IECEx System comprises global certification programs for both equipment and service facilities.

The IECEx certification involves

– in addition to the product tests – assessment of quality control procedures and testing plans, audits of manufacturing plants, and routine on-going surveillance and inspections.

In addition, IECEx has established a comprehensive set of operational documents and procedures to develop a single internationally standardized approach to Ex testing and certification. The most important document is IECEx OD02, Rules of procedure for equipment certification.

The approach includes:

- A standardized "IECEx way of Ex Testing and Certification". There is a single set of operational procedures, and Ex test procedures are always applied in the same way.
- A dedicated Technical and Operational Secretariat to maintain operations. Ex test procedures are evaluated and monitored on a centralized basis.

Who is responsible for the certification work?

A manufacturer needing to have equipment certified under the IECEx System can apply to an IECEx Competent Body (ExCB) in any member country. At present there are 30 IECEx member countries. The ExCB performs or coordinates the activities of certification.

A quality assessment of the manufacturer is undertaken by the ExCB itself, and the auditor issues an IECEx Quality Assessment Report (QAR).

Type testing of product samples is performed on behalf of the ExCB by an IECEx Assessment and Testing Laboratory (ExTL). On completion of its work the ExTL's assessment engineer prepares an IECEx Test Report (ExTR).

The ExTR is then submitted to the ExCB for endorsement. Based on the QAR and ExTR, the ExCB then issues the Certificate of Conformity (CoC). The CoC provides internationally accepted verification that the equipment in question is in compliance with the relevant IEC standards.

Once formally issued by the ExCB, both the ExTR and QAR are registered on the IECEx Internet site. This provides verification that an ExTR and QAR exist for the product and manufacturer.

How do I know if a motor is IECEx certified?

IECEx certified motors show the certification number on their rating plate, for example: "IECEx LCI 05.0008". In this case "LCI" indicates that the IECEx Certificate was issued by LCIE, an IECEx approved Certification Body in France.

In addition, IECEx certificates are issued in electronic form and are publicly available on the IECEx website. They can therefore be viewed and printed by anyone with access to the Internet. See 'Online Certificates' at www.iecex.com.

IECEx certification is particularly useful in certain markets. In Australia, New Zealand, and Singapore, for example, IECEx certificates are accepted, but not all IEC certificates are accepted. Certain other countries, including Korea and China, are prepared to accept ExTRs as a basis for their own national certificates. There are also many countries that

are willing to accept products covered by current IECEx certificates, even though the countries in question are not members of the IECEx Management Framework.

IECEx Conformity Mark License

The IECEx Conformity Mark System was introduced in 2008. IECEx Conformity Mark Licenses are issued by approved Certification Bodies in IECEx participating countries.

The IECEx Conformity Mark shows that a product has been granted an IECEx Certificate of Conformity. IECEx Certification confirms that the product has the appropriate protection for use in explosive atmospheres and that it has been manufactured under systems subject to ongoing surveillance by Certification Bodies. It is recognized in all the countries participating in the IECEx System, and also means that the product can be supplied to the market without the need for additional tests.

ABB has been granted IECEx Certification for a wide range of low and high voltage motors, and these can therefore display the IECEx Conformity Mark. The hazardous area protection types provided by these motors include

- Flameproof Ex d
- Non-sparking Ex nA
- Dust tight Ex tD

The IECEx Conformity Mark License will considerably enhance ABB's ability to market its products globally. It complements ABB's existing ATEX approval, which is based on two EU Directives governing the use of equipment in potentially explosive atmospheres.

Benefits of IECEx System for endusers

A significant advantage of IECEx is that vendor certificates are available for inspection on the IECEx website. End users can therefore confirm the validity of IECEx certificates at any time - which is not possible with ATEX, for example. This increases end user confidence that the motor vendor will be committed to maintaining the necessary quality systems.

Under quality based IECEx certification approach the interpretation of the standard is shared throughout the 31 participating countries and individual interpretations by Notified Bodies are not allowed. Another advantage of IECEx is that the Certificate of Conformity also covers Zone 2.

Which ABB motors and generators are IECEx certified?

All M3JP/M3KP 80-400 motors with protection type Ex d and Ex de, and all M3GP 80-450 with protection type Ex nA, are IECEx certified.

ABB refers to recently updated standards

In the implementation of ATEX 95 and ATEX 137 directives ABB refers to the IEC and EN standards which have been recently updated. Otherwise ABB refers to IEC standards mentioned in certificates.

Main standards for explosive atmospheres:

IEC/EN 60079-0	Equipment - General requirements
IEC/EN 60079-1	Equipment protection by flameproof enclosures "d"
IEC/EN 60079-7	Equipment protection by increased safety "e"
IEC/EN 60079-15	Equipment protection by type of protection "n"
IEC/EN 60079-31	Equipment dust ignition protection by enclosure "t"
IEC/EN 61241-14	Selection and installation of Ex tD (DIP) equipment
IEC/EN 60079-14	Electrical installations design, selection and erection
IEC/EN 60079-17	Electrical installations inspections and maintenance
IEC/EN 60079-19	Equipment repair, overhaul and reclamation
IEC 60050-426	Equipment for explosive atmospheres
IEC/EN 60079-10	Classification of hazardous area (gas areas)
IEC 60079-10-1	Classification of areas - Explosive gas atmospheres
IEC 60079-10-2	Classification of areas - Combustible dust atmospheres
EN 61241-0	Electrical apparatus for use in the presence of combustible dust
EN 61241-1	Protection by enclosure 'tD'
IEC/EN 61241-10	Classification of area where combustible dusts are or may be present

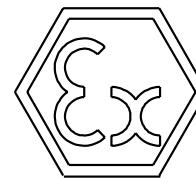

Note: The very latest revisions of standards, which are not cited hereby, will introduce a "protection level" and thus change the marking of the motors. Some new requirements are also added to several protection types.

Explosive atmospheres

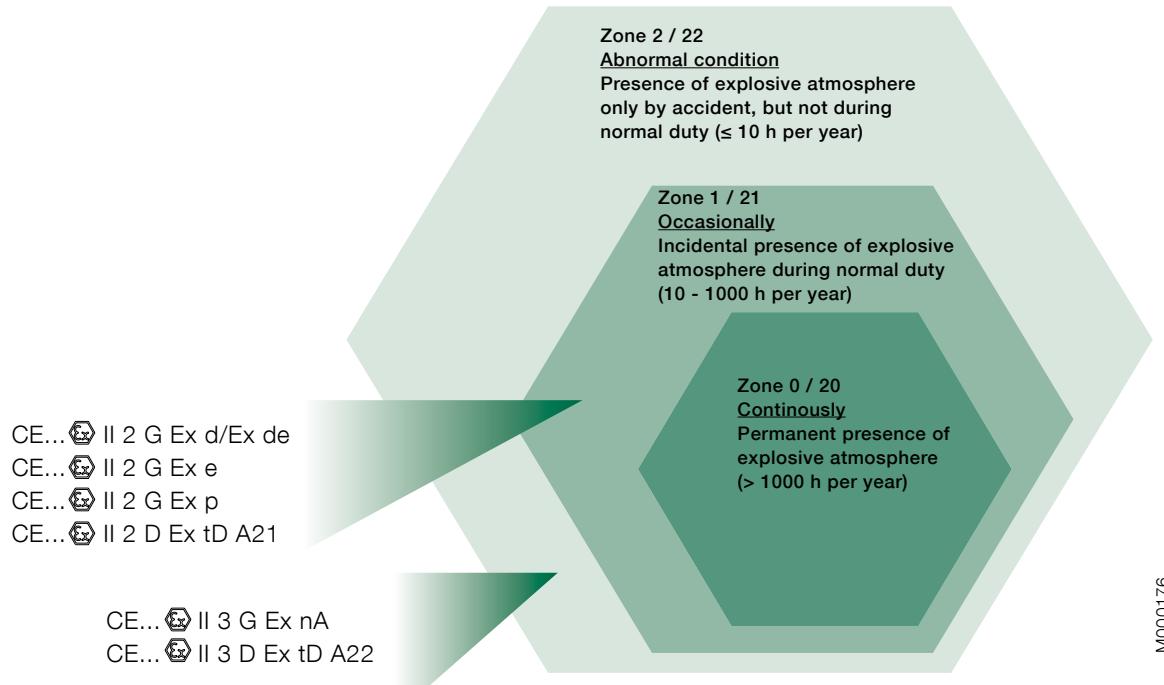

Explosive atmospheres worldwide are classified by zone, according to the risk posed by explosive gas or dust in the atmosphere.

M000168

M000169

Classification of explosive atmospheres according to CENELEC and IEC

The definition of areas according to the presence of atmosphere are set up in the following standards:

IEC/EN 60079-10-1 Gas
IEC/EN 60079-10-2 Dust

Explosive atmosphere	Permanent presence	Incidental presence (normal operation conditions)	Accidental presence (abnormal operation conditions)
Gas ('G')	Zone 0	Zone 1	Zone 2
Dust ('D' / 'DIP' / 'Ex tD')	Zone 20	Zone 21	Zone 22

Note: In certain countries Ex d and Ex e motors are also used in Zone 2.

Marking temperatures, gas groups and explosive atmospheres

To ensure equipment can be safely used in potentially explosive atmospheres, the explosive atmospheres where the equipment is installed must be known. Temperature class of equipment must be compared with the spontaneous ignition temperature of the gas mixtures concerned and its gas group must be known in specific cases (e.g. flame proof protection).

Categories or classification

The ATEX Directive has introduced the concept of "Categories" which is a way of expressing the capability of equipment respecting the EHSR versus the Zone where the equipment is installed.

Category 1	according to Annex 1 of ATEX 95 used in Zone 0 or Zone 20
Category 2	according to Annex 1 of ATEX 95 used in Zone 1 or 21
Category 3	according to Annex 1 of ATEX 95 used in Zone 2 or 22

Classification

	Category equipment	Inflammable substances	Level of protection	Fault protection	Comparison with present practice and IEC
Equipment group I (mines)	M1	Methane, dust	Very high level	2 types of protection or 2 independent faults	Group I
	M2	Methane, dust	High level	1 type of protection Normal operation	Group I
Equipment group II (surface)	1	Gas, vapours, mist, dust	Very high level	2 types of protection or 2 independent faults	Group II Zone 0 (gas) / Zone 20 (dust)
	2	Gas, vapours, mist, dust	High level	1 type of protection Habitual frequent malfunction	Group II Zone 1 (gas) / Zone 21 (dust)
	3	Gas, vapours, mist, dust	Normal	Required level of protection	Group II Zone 2 (gas) / Zone 22 (dust)

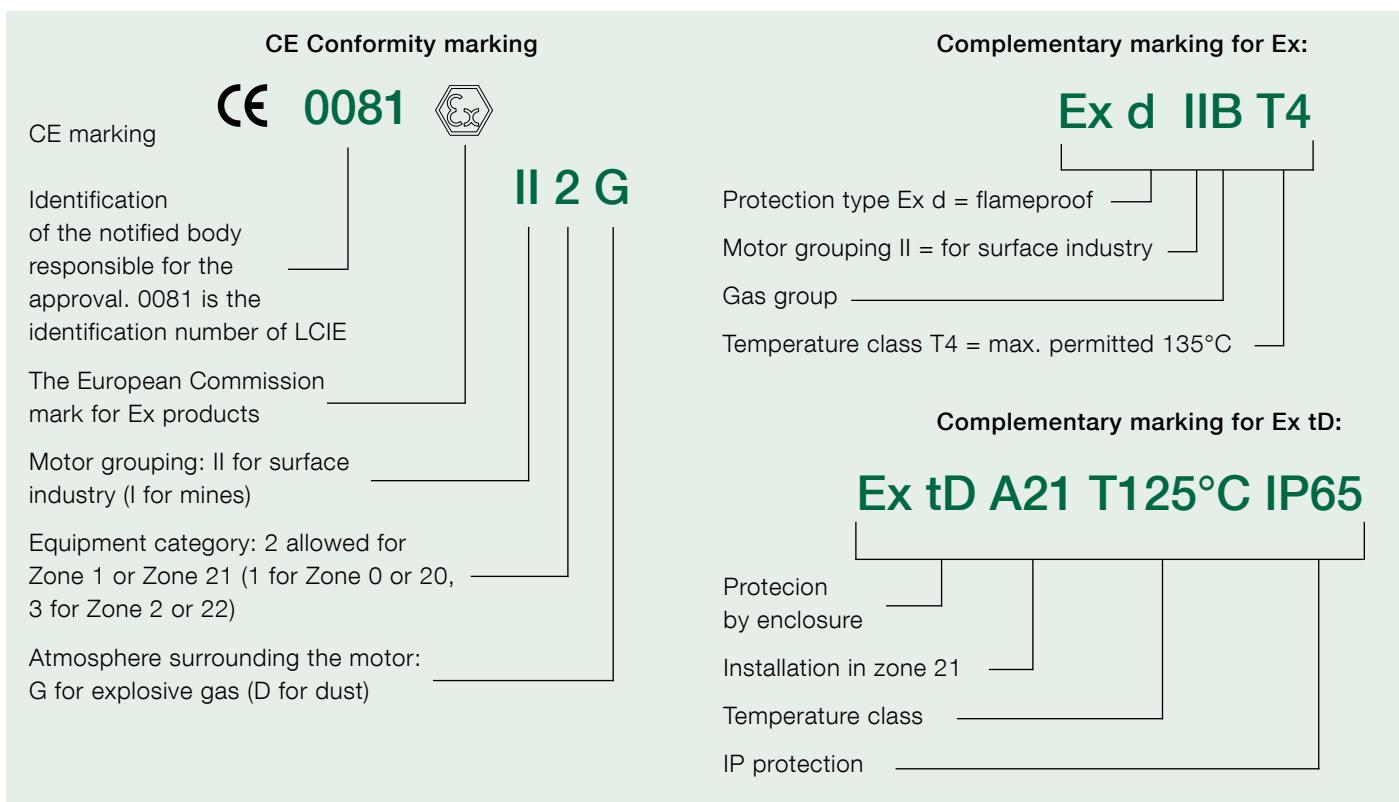

Temperature classes

Temperature class	Ignition temperature for the gas/vapour °C	Max. permitted temperature equipment °C
T1	> 450	450
T2	> 300 < 450	300
T3	> 200 < 300	200
T4	> 135 < 200	135
T5	> 100 < 135	100
T6	> 85 < 100	85

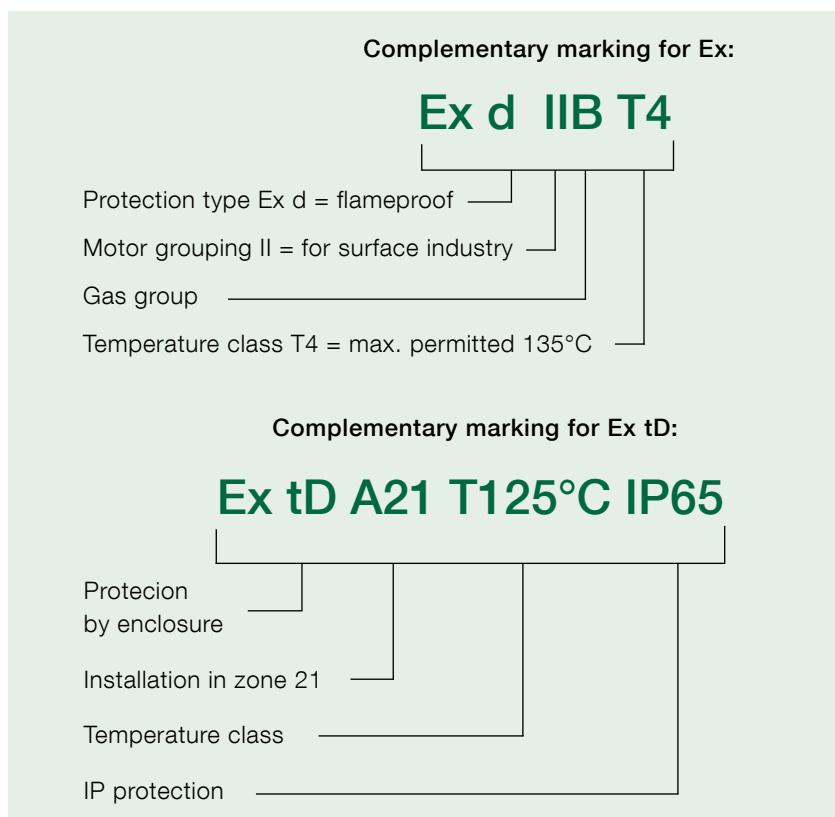

Grouping of electrical apparatus

Group I	Apparatus for coal mines susceptible to firedamp
Group II	Apparatus for explosive atmospheres other than mines; surface industries
IIA, IIB, IIC	Group II is subdivided for Ex d and Ex i -equipment according to the severity of the environment. IIC is the highest rating; a motor from one of the higher categories can also be used in a lower category environment

Marking of equipment according to ATEX

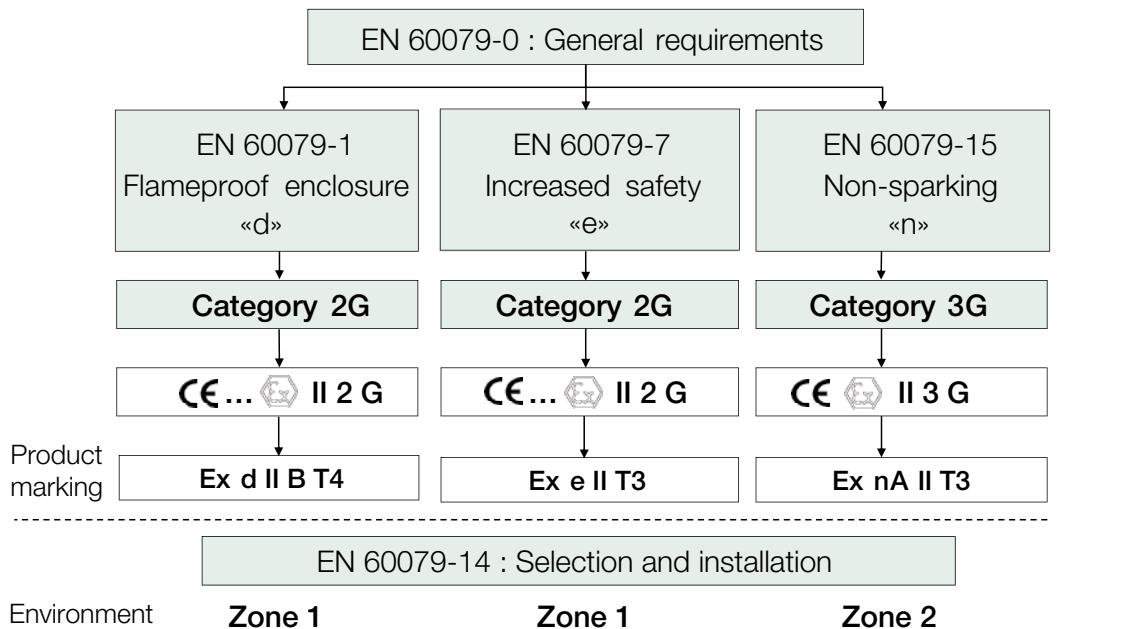

Marking of equipment according to IECEx

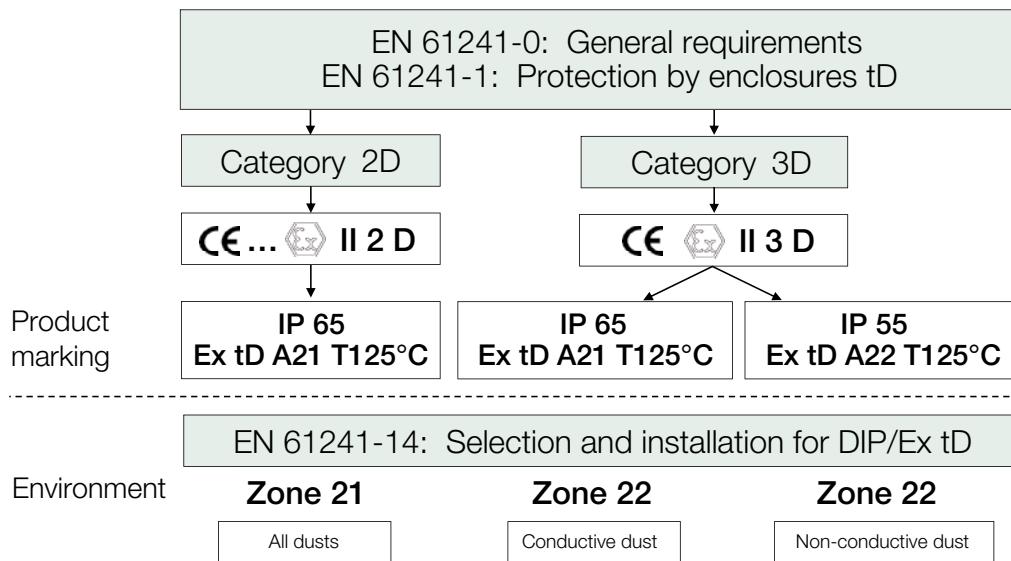

Selection of products for explosive atmospheres

EN Standard for Group II: Gas environments

M000170

EN Standard for Group II: Dust environments

M000171

General about explosive atmospheres

Preamble

In explosive atmospheres, it is the utmost importance to ensure the safe use of electrical apparatus. To this end, many countries have regulations concerning both the design and use of such apparatus. These regulations are becoming increasingly harmonized within the framework of IEC recommendations and European Standards. The hazard may be due to an explosive atmosphere composed of a mixture of gas, vapors or dusts with air. This chapter only deals with safety in explosive gas atmospheres for which European Standards exist.

Flameproof enclosure Ex d and Ex de

The motor enclosure shall be designed in such a way that no internal explosion can be transmitted to the explosive atmosphere surrounding the motor. The enclosure must withstand, without damage, any pressure levels caused by an internal explosion. The shape, length and gap of part assembly joints, at shaft opening, cable entries, etc., shall be designed to allow for throttling and cooling of hot gases escaping outside. The standards emphasize the impact of an explosive atmosphere (for instance, explosion pressure) over constructional requirements of such apparatus.

Work on assembly devices of enclosure component parts is only permitted using prescribed tools. Cable entries must meet the requirements of this type of protection.

The temperature of the motor's external enclosure shall not exceed the self-ignition temperature of the explosive atmosphere of the installation area during normal operation. For this reason, rated output depends on this rated maximum temperature for the considered area.

No motor device outside the flameproof enclosure (e.g., ventilation) shall be a potential source of sparks, arcs or dangerous overheating.

Variants combining two types of protection usually combine "d" and "e" protection. The motor is designed with an Ex d flameproof enclosure, while the terminal box features an Ex e increased safety protection. Such design combines the superior safety degree of the "d" type of protection with the less stringent electrical connection requirements of increased safety motors.

Motors featuring dual protection are seldom encountered—such as an increased safety motor with a flameproof enclosure designated Ex e / Ex d in European Standards.

Alleinschutz – thermistors as sole protection (optional)

The flameproof motors from ABB, frame sizes 80 to 400, have been certified for thermistors as sole protection against overload. This construction, "Alleinschutz", is available as an option, see variant codes.

"Alleinschutz" is a term that defines the certification of flameproof motor and protection device together. The certificate confirms that thermistors and relays will switch off the motor in case of overheating before the temperature of the motor's external enclosure exceeds the temperature marking stamped on the rating plate.

Each motor ordered with thermistors as sole protection will be tested, with locked rotor, up to the point where the thermistors trigger the relay to turn off the motor. At the triggering temperature, the motor has to be within the certified temperature class.

The relay is included in the certificate, which means that only approved relays can be used for "Alleinschutz".

Please note that sizes 315 to 400 require special technical solutions, consult ABB.

Increased safety design, Ex e

The design of this motor type prevents the occurrence of sparks, arcs or hot spots in service (including starting and locked rotor situation), that could reach the self-ignition temperature of the surrounding, potentially explosive atmosphere, in all inner and outer parts of the machine.

This is ensured by applying constructional or dimensional provisions that mainly concern:

- specified minimum values for creepage distances and clearances
- use of tracking-proof isolating materials
- suppression of sharp angles where static electrical loads could build-up
- ensuring electrical and mechanical assemblies are tightly secured
- minimum backlash values between stationary and rotating parts (e.g., air gap, ventilation, etc.)
- temperature-rise limits, taking into account locked rotor, normal operation, accidental mechanical stalling of machine under the most adverse thermal conditions, i.e. when thermal equilibrium of machine is reached while in service.

Temperature rise limits are to be considered for two operating aspects; one for normal operating conditions and the other under accidental stalling conditions.

Temperature rise limits under normal operating conditions

The expected electrical lifespan of a motor depends on its temperature rise for a given insulation class, and on the motor winding temperature, in operation, which is not homogeneous with hot spots appearing. For these reasons, a safety margin of 10 K is allowed for between windings temperature rise at rated output, as measured by the change of resistance method, and the maximum temperature rise permitted by the winding insulation class.

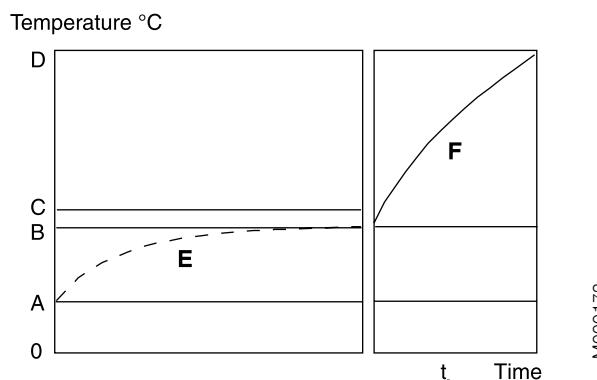

Figure 1.

- O = temperature 0°C
- A = Max. ambient temperature, reference 40°C
- B = Temperature at rated load and at worst voltage conditions
- C = Max temperature as permitted by the insul. class
- D = Max limit temperature as set by the nature of the potentially explosive atmosphere
- E = Temperature-rise curve of motor at rated output and at worst voltage conditions
- F = Temp. rise curve under stalled rotor conditions
- t_E = stalled rotor time

Temperature rise limits during short circuit under accidental stalling conditions

Should the machine stall while in operation, a shortcircuit current nearly equal to the starting current will develop, and stator and rotor winding temperatures will rise rapidly (see figure 1).

To prevent this temperature value from exceeding the temperature level below protection devices must trip within a specified time (t_E). This tripping time depends on the short-circuit current level or the short-circuit current to rated current ratio (IA/IN). Figures 2 and 3 show, for commonly used protection devices, the limiting ratio between short-circuit current inrush IA/IN and rotor stalling time t_E , according to the EN and VIK.

This type of protection is inappropriate for commutator machines or brake-motors which, by principle, are capable of producing arcs or hot spots.

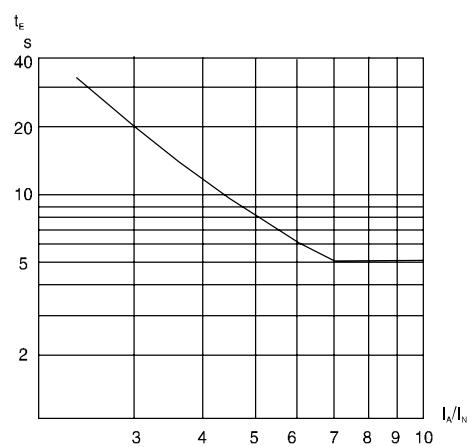

Figure 2. Min. value of time t_E as a function of IA/IN acc. to EN 50019.

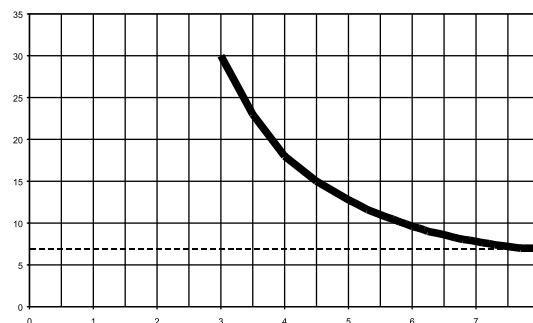

Figure 3. Min. value of time t_E as a function of IA/IN acc. to VIK.

Non-sparking design, Ex nA

This type of protection is allowed to be used in the hazardous area corresponding to zone 2. This design is also known as 'Non-sparking' type as the motor must be designed in such a way that no sparks can occur in any conditions, used within the ratings specified by the manufacturer, and that no excessive temperatures occur at normal conditions, which excludes thermal requirements due to starting or accidental stalling.

Ex nA motors are certified according to the ATEX 95 directive with a "voluntary type examination certificate".

ABB provides also non-sparking motors certified according to IEC Ex.

Dual certification

Ex nA motors in cast iron frame can also be used for Dust/ Ex tD –applications in zone 22. Following combinations are possible:

- DIP T125°C/Ex tD A22, IP55 for zone 22 + Ex nA II T3
- DIP T125°C/Ex tD A22, IP65 for zone 22 + Ex nA II T3

These features are possible due to the IP protection. The gases penetrate this protection, and thus the inside surface temperature class is T3 (200°C). The ingress of dust, however, is prevented and the dust determines the outside surface temperature class: T 125°C.

Dust ignition protection / Protection by enclosures “tD” in explosive atmospheres

Combustible dusts is hazardous as it can form potentially explosive atmospheres when dispersed in the air. Furthermore, layers of combustible dust may ignite and act as ignition source for an explosive atmosphere. Explosive atmospheres with dust can be found in a variety of industries such as agriculture, chemicals, plastics, stock holding.

Selection and installation of electrical equipment

To ensure equipment can be safely used in explosive atmospheres with dust, the following procedure should be considered before selecting a product:

1. Type of dust:

- Will a cloud of dust be present around the product or
- will a layer of dust build up on the product and if so, what will be the maximum thickness of the layer between two cleaning/maintenance periods?

2. Characteristics of the dust:

- Is the dust electrically conductive or non-conductive?

3. Ignition temperature of the dust:

- T_{ci} : Ignition temperature of dust in a "cloud" or
- T_{5mm} : Ignition temperature of a 5 mm dust layer

This protection prevents any explosion transmission of dust because:

- The ingress of dust into the motor is prevented by the IP protection, being either IP55, called dust protected, or IP 65, called dust tight.
- The maximum surface temperature outside the motor must not exceed the temperature class for which the motor is certified.
- No sparks must occur outside the motor enclosure.

Certification: Ex tD A21 (for zone 21) motors are certified according to ATEX with an EC type examination certificate, whereas Ex tD A22 (for zone 22) motors have a “voluntary type examination certificate”.

Selection and installation of product: EN 61241-14

Equipment category	Category 1 (zone 20)	Category 2 (zone 21)	Category 3 (zone 22)
Minimum protection for equipment	Not applicable for electric motors	Ex tD/IP 6X	Ex tD A22/IP 5X for non-conductive dust Ex tD A22/IP 6X for conductive dust

Marking temperature

Type of dust	Ignition temperature of the dust	Maximum surface temperature of motor	Marking temperature of equipment T°C
Cloud	TCI	2/3 x TCI	T°C ≤ 2/3 x TCI
Layer up to 5 mm	T5mm	T5mm – 75 K	T°C ≤ (T5mm – 75 K) or T°C ≤ (2/3 x TCI) Which ever value is the smallest value

Substances

Products	AIT for a cloud (°C)	AIT for a layer (°C)
PVC	450	330
Sulfur	240	250
Charcoal	520	230
Barley/Corn/Maize	380	280
Sugar	310	420
Wheat	350	270

AIT = auto ignition temperature

Testing and certificates

Motors for explosive atmospheres have to be officially approved by a recognized test organization, authorized to issue test certificates, to ensure compliance with standards for this type of equipment.

Motors are defined and classified according to the categories and protection type which are defined in the corresponding standards.

Depending on the nature of the atmosphere, it is the responsibility of the user to determine which group and which maximum surface temperature should be specified for the motor installation.

The motors are rated and certified for ambient temperature between -20°C and +40°C according to standards. For ambient temperatures below -20°C and above +40°C certificates are available for most of the motors.

ABB's motors conform to the stringent standards set by CENELEC (European Committee for Electrotechnical Standardization), and are approved by testing laboratories (ExNB: Notified Body).

Motors can be certified by any of the Notified Bodies "ExNB" of EU member countries. These motors are therefore acceptable in all EU countries and many other countries.

Global certificates available are: IECEx System, ATEX and CSA certificates. Typical national certificates available are e.g. GOST-R for Russia, GOST-K for Kazakhstan, INMETRO for Brazil and CQST for China. KOSHA certification for Korea is available, but has to be applied for case by case. Local certifications are mainly obtained based on IECEx or ATEX.

Risk assessment and gas tests

Non-sparking (Ex nA) and increased safety (Ex e) motors have to meet tough requirements with regard to sparking. The latest IEC and EN standards specify criteria for risk assessment and gas environment tests for rotor and stator designs to show that the motors are spark-free in all operational conditions.

By testing and securing certification for its motors, ABB is helping to streamline the risk assessment process for its customers.

The alternative to testing and certification involves, in the majority of cases, equipping the motor with provision for pre-start ventilation. This means investing in a higher capacity air compressor, piping, and a ventilation control unit. It also requires an additional operation – ventilation – every time the motor is started.

Benefits of the ABB approach therefore include reduced initial capital expenditure, lower operating costs, and faster starting. Reliability is improved as no additional components are required. Most importantly, ABB's certified motors offer proven safety, as testing represents the only way to verify that equipment is really safe.

ABB's approach to meet the new requirements

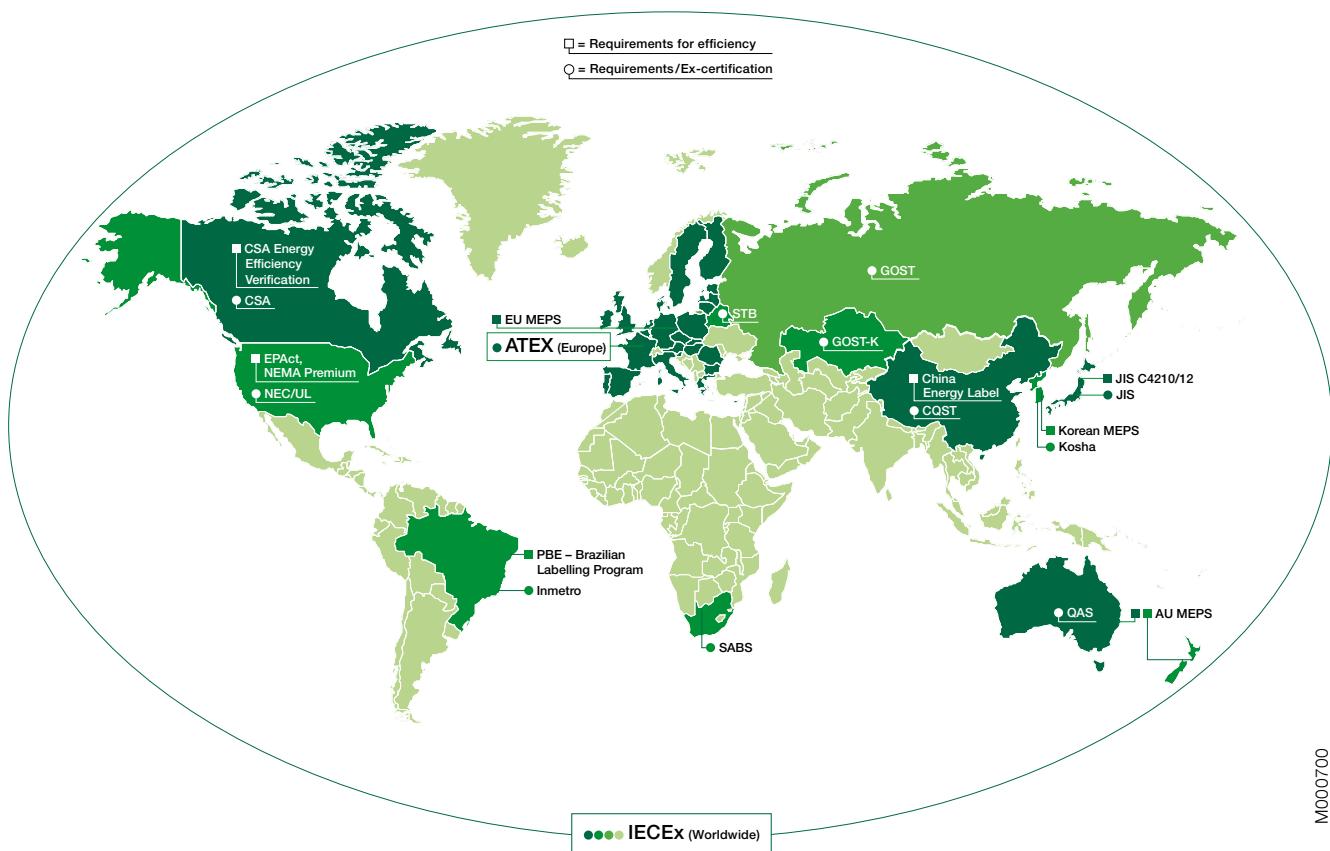

Following a program of gas environment tests in which all rotor and stator tests were passed, ABB has secured certification for its low voltage cast iron motors for explosive atmospheres with aluminum die cast rotor.

International motor efficiency standards

Since the validation of the standard IEC/EN 60034-30, a worldwide energy efficiency classification system exists for low voltage three-phase asynchronous motors. This system increases the level of harmonization in efficiency regulations around the world and it also covers Hazardous area motors. International Electrotechnical Commission (IEC) standard IEC/EN 60034-30:2008 defines energy-efficiency (IE code) classes for single speed, three-phase, 50 and 60 Hz induction motors. The standard is part of an effort to unify motor testing procedures and efficiency and product labeling requirements to enable motor purchasers worldwide to easily recognize premium efficiency products. The efficiency levels defined in IEC/EN 60034-30 are based on test methods specified in IEC/EN 60034-2-1:2007.

To promote transparency in the market, IEC 60034-30 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used as the different methods can produce differing results.

Motors for explosive atmospheres being part of the scope of this standard IEC/EN 60034-30 means that Ex-motors can be labeled with IE-code. Ex-motors are already included in many other MEPS (Minimum Energy Performance Standard) schemes around the world; Australia, US, Canada, China, Korea, Brazil.

M000700

IEC/EN 60034-30:2008

IEC/EN 60034-30:2008 defines three International Efficiency (IE) classes for single speed, three-phase, cage induction motors.

- IE1 = Standard efficiency (EFF2 in the former European classification scheme)
- IE2 = High efficiency (EFF1 in the former European classification scheme and identical to EPAct in the USA for 60 Hz)
- IE3 = Premium efficiency (identical to "NEMA Premium" in the USA for 60 Hz)
- IE4 = Super premium, according to IEC/TS 60034-31

Efficiency levels defined in IEC/EN 60034-30 are based on test methods specified in IEC/EN 60034-2-1:2007.

Compared to the former European efficiency classes defined by the CEMEP agreement the scope has been expanded.

IEC/EN 60034-30 covers almost all motors (for example standard, hazardous area, marine, brake motors)

- Single speed, three-phase, 50 Hz and 60 Hz
- 2-, 4- or 6-pole
- Rated output from 0.75 to 375 kW
- Rated voltage U_N up to 1000 V
- Duty type S1 (continuous duty) or S3 (intermittent periodic duty) with a rated cyclic duration factor of 80 % or higher
- Capable of operating direct online

The following motors are excluded from IEC 60034-30:

- Motors made solely for converter operation
- Motors completely integrated into a machine (for example, pump, fan or compressor) that cannot be tested separately from the machine

Minimum efficiency values defined in IEC 60034-30:2008 standard (based on test methods specified in IEC 60034-2-1:2007)

Output kw	IE1			IE2			IE3		
	2 pole	4 pole	6 pole	2 pole	4 pole	6 pole	2 pole	4 pole	6 pole

ABB and efficiency standards

As a global player committed to supplying safe, reliable and efficient motors, ABB designs and labels its motors for explosive atmospheres to comply with international efficiency standards published by the IEC (International Electrotechnical Commission). ABB determines efficiency values according to IEC/EN 60034-2-1 using the low uncertainty method i.e. indirect method, with additional load losses determined by measurement.

As the world market leader, ABB offers the largest range of LV motors available. It has long advocated the need for efficiency in motors, and high efficiency products have formed the core of its portfolio for many years. The core of ABB's Ex range is based on a full range of IE2 motors – with many available from stock. At the end of 2010 ABB launches the first of its future range of Premium efficiency motors for explosive atmospheres.

*) Not stated in IEC 60034-7.

Note: In case of motors mounted with the shaft upwards and water or liquid are expected to go down along the shaft, the user must take into account to mount some means capable to preventing it.

Voltage and frequency

The table values for output, speed, efficiency, power factor, starting torque and starting current apply at the rated voltage and frequency. These values will be affected if the supply voltage or frequency deviate from the rated values.

The motors can operate continuously at the rated output, with a long-term voltage deviation of 5 % from the specified value or range of values, and at the rated frequency without exceeding the temperature class stamped on the rating plate. The temperature rise of the winding may increase by 10 K, but without exceeding the insulation temperature class stamped on the rating plate. Voltage deviations of up to 10 % are permissible for short periods only.

Surface treatment

ABB cast iron motors for explosive atmospheres are provided as standard with a painting system that corresponds to corrosion category C3M specified by ISO/EN 12944:2. ISO/EN 12944 divides durability into 3 ranges: low (L), medium (M) and high (H). Low (L) durability corresponds to 2-5 years, medium (M) to 5-15 years and high (H) to more than 15 years. ABB surface treatment corresponds to medium (M) durability.

Durability does not represent a guaranteed time span. Instead it is a technical consideration that can help the owner to set up a maintenance program. Maintenance is

often required at more frequent intervals because of fading, chalking, combination or wear and tear or for other reasons.

Other corrosion categories (C4M and C5M) are available as options. In addition surface treatment according to Norsok requirements (755) for offshore environments is available as an option. Please see the variant code section for exact availability.

Standard ABB colour is Munsell Blue 8B 4.5/3.25. Other colours are available and can be ordered with variant code 114.

Classification of atmospheric environments according to ISO 12944:2 based on thickness loss.

Corrosivity categories	Outdoor atmospheres	Indoor atmospheres	ABB
C1 - Very low	-	Heated buildings with clean atmospheres, e.g. offices, shops, schools, hotels.	
C2	Atmospheres with low level of pollution. Mostly rural areas.	Unheated buildings where condensation may occur e.g. depots, sport halls	
C3 - Medium	Urban and industrial atmospheres, moderate sulfur dioxide pollution. Coastal areas with low salinity.	Production rooms with high humidity and some air pollution e.g. food-processing plants, laundries, breweries, dairies	Standard surface treatment
C4- High	Industrial areas and coastal areas with moderate salinity.	Chemical plants, swimming pools, coastal ship- and boatyards.	Optional surface treatment with variant code 115
C5-I - Very high	Industrial areas with high humidity and aggressive atmosphere.	Buildings or areas with almost permanent condensation and with high pollution.	
C5-M - Very high	Coastal and offshore areas with high salinity.	Buildings or areas with almost permanent condensation and with high pollution.	Optional surface treatment with variant code 754

Bearings

ABB policy is to have reliability as a vital issue in bearing design as well as in bearing lubrication systems. That is why we, as standard, follow the L_1 -principle for calculating regreasing intervals (meaning that 99 per cent of the bearings achieve or exceed the calculated grease lifetime). The lubrication intervals can also be calculated according to L_{10} -principle which means that 90 per cent of the motors are sure to make the interval time. L_{10} -values, which are normally doubled compare to L_1 -values, are available from ABB at request.

Motors with permanently greased bearings

Cast iron motors up to frame size 132 and aluminum motors up to frame size 250 are normally fitted with permanently greased bearings of type Z or 2Z. The exception is 2D DIP motors with aluminum frame sizes 63-132, which are fitted with 2RS bearings because higher protection is required.

Guidelines for bearing life time acc. to L_1 principle:
Aluminum motors

- 2 and 2/4 pole motors, 10 000 - 20 000 duty hours ¹⁾
- 4 to 8 pole motors, 20 000 - 40 000 duty hours ¹⁾

Cast iron motors

- 2 and 2/4 pole motors, 20 000 duty hours ¹⁾
- 4 to 8 pole motors, 40 000 duty hours ¹⁾

¹⁾ depending on application and load conditions.

Motors fitted with grease nipples

Cast iron motors from frame size 160 are as standard fitted with regreasable bearings.

Lubricate the motor when operating.

For motors with lubrication systems we recommend not to exceed lubrication interval of two years in any case.

Lubrication

Lubricate the motor when operational. If a grease outlet plug is fitted, temporarily remove when lubricating, or permanently with auto lubrication. If the motor is fitted with a lubrication plate, use values given, or use the values given in the table beside. These values are according to L_1 -principle, which is the ABB standard for all motors.

The effectiveness of the motor lubrication should be checked by measuring the surface temperature of bearing endshields during normal operating conditions. If the measured temperature is +80°C or above, the relubrication intervals

must be shortened; i.e. the relubrication interval should be halved for every 15K increase in bearing temperature. If this is not possible ABB recommends the use of lubricants suitable for high operating temperature conditions. These lubricants allow a normal relubrication interval and 15K increase in bearing temperature conditions.

Formula to change the L_1 values roughly to L_{10} values:

$$L_{10} = 2.0 \times L_1$$

Lubrication intervals according to L₁ principle

Frame size	Amount of grease g/bearing	kW	3600 r/min	3000 r/min	kW	1800 r/min	1500 r/min	kW	1000 r/min	kW	500-900 r/min

Transport locking

Motors with roller bearings or an angular contact ball bearing are fitted with a transport lock before despatch to prevent damage to the bearings during transport. When the transport lock is fitted, the motor is provided with a warning sign.

Locking may also be fitted in other cases where the transport handling could be damaging.

Axially-locked bearings

The table below shows axial locking of the bearings. See also variant code 042.

Aluminum motors

Motor size	Foot-mounted motors		Flange-mounted motors	
	Large flange	Small flange		
63	On request at D-end		On request at D-end	
63-132	D-end ¹⁾		D-end ¹⁾	D-end ¹⁾
160-280	D-end		D-end	-

¹⁾ A spring washer at the N-end locates the rotor at the D-end.

Cast iron motors

Motor size	Foot-mounted motors		Flange-mounted motors	
Non-sparking and Increased safety motors:				
80-450	D-end		D-end	
Flameproof motors:				
80-400	D-end		D-end	

Axial and radial forces

Please see separate sections. Detailed information about permissible loadings on the shaft end can be found under each motor protection type.

Low voltage motors and frequency converters for explosive atmospheres

Frequency converters provide significant benefits when used with motors for explosive atmospheres. The advantages include better process control through regulation of the motor speed, as well as energy savings, and therefore improved environmental performance.

Certain criteria must be taken into account to ensure the safety of the frequency converter and motor combination, as well as the maximum usability of the application. The requirements depend on the protection type in use and whether the motor is regarded as being one component within a wider system or a separate subsystem.

ABB offers hazardous area motors for use with variable speed drives with the following protection types: flameproof, increased safety (on request), non-sparking, and dust ignition proof. These motors are designed and certified for operation with frequency converters. Instructions for the different protection types, as well as for the most common types of converter, are provided below. If further information is needed, please do not hesitate to contact ABB.

A. Main requirements for hazardous area motors used with variable speed drives

1. Flameproof motors (Ex d, Ex de)

The standards specify that the motor must be dimensioned so that its maximum outer surface temperature is limited according to the temperature class. In most cases this requires either type tests or control of the outer surface temperature of the motor.

Most ABB flameproof motors for temperature class T4 have been type tested with ABB ACS800 converters utilizing Direct Torque Control (DTC) as well as with ABB ACS550 frequency converters, and these combinations can be selected using the loadability curves shown in Figures 2 and 4. Combined tests with above mentioned converters are needed only if the limits of the loadability curves are exceeded. On such cases also separate certification of the motor and converter combination may be required.

In the case of other voltage source converters using pulse width modulation (PWM) with scalar or vector control, combined tests are needed to confirm the correct thermal performance of the motor. These tests can be avoided if the motor is fitted with thermal sensors to control the surface temperature. Such motors have the following additional markings on their rating plate: -“PTC” with the tripping temperature and “DIN 44081/82”

In the case of voltage source PWM converters, with a minimum switching frequency of 3 kHz or higher, the instructions provided in section B/2.4 can be used for preliminary dimensioning.

For more information on using flameproof motors for temperature classes T5 and T6 with variable speed drives, please contact ABB.

2. Increased safety motors (Ex e)

The motor should always be tested together with the specified converter, and ABB therefore does not recommend the use of low voltage increased safety motors with variable speed drives.

3. Non-sparking motors (Ex nA)

According to the standards, the combination of motor and converter must be tested as a unit with the specified converter or a comparable one or dimensioned by calculation.

ABB non-sparking cast iron motors have been type tested with ABB ACS800 converters utilizing DTC control) as well as with ABB ACS550 converters, and these combinations can be selected using the dimensioning instructions provided in section B/2.2. Combined tests with above mentioned ACS800 and ACS550 converters are needed only if the limits of the loadability curves are exceeded. On such cases also separate certification of the motor and converter combination may be required.

In the case of other voltage source PWM converters, combined tests are needed to confirm the correct thermal behavior of the motor. For preliminary dimensioning purposes, the instructions provided in section B/2.4 can be used. The final values must be verified by combined tests.

4. Dust ignition proof motors (Ex tD)

The standards specify that the motor must be dimensioned so that its maximum outer surface temperature is limited according to the temperature class (e.g. T125°C or T150°C). For more information on temperature classes lower than 125°C, please contact ABB.

ABB Ex tD motors (T125°C and T150°C) have been type tested with ACS800 converters utilizing DTC control as well as with ABB ACS550 converters, and these combinations can be selected using the dimensioning instructions provided in section B/2.4. Combined tests with above mentioned ACS800 and ACS550 converters are needed only if the limits of the loadability curves are exceeded. On such cases also separate certification of the motor and converter combination may be required.

In the case of any other voltage source PWM converter, combined tests are needed to confirm the correct thermal performance of the motor. These tests can be avoided if the motor is fitted with thermal sensors to control the surface temperature. Such motors have the following additional markings on their rating plate: -“PTC” with the tripping temperature and “DIN 44081/82”.

In the case of voltage source PWM converters with a minimum switching frequency of 3 kHz or higher, the instructions provided in section B/2.2 can be used for preliminary dimensioning.

B. Other safety criteria

These criteria are imposed by the competent bodies in order to ensure the safe use of motors with converters in explosive atmospheres.

1. Type tests and certification

ABB has type tested and certified the complete range Exd, Ex de, Ex nA and Ex tD/DIP motors for operation with frequency converters. On request, ABB can supply type test reports based on the test procedure specified by the Notified Bodies for a representative number of motors with ACS800 and ACS550 converters.

For other voltage source PWM converters, in most cases a combined type test is required to ensure safe operation.

2. Motor dimensioning for variable speed applications

2.1 General

The voltage (or current) fed by the frequency converter is not purely sinusoidal. This may increase motor losses, vibration, and noise. Furthermore, a change in the distribution of the losses may affect the motor temperature balance and lead to increased temperature.

When the motor is operating at low speeds the cooling capacity of the ventilation fan is decreased, which reduces the motor's loadability. A separate constant speed fan can be used to increase cooling capacity and loadability at low speeds.

When dimensioning a motor for variable speed applications, the continuous thermal dimensioning and short time overloads should be considered.

2.2 Thermal dimensioning with ABB ACS800 converters utilizing DTC control

In the case of ABB ACS800 converters utilizing DTC control, dimensioning can be done using the loadability curves (or load capacity curves) in Figures 2 and 3. The loadability curves show the maximum allowed continuous output torque of the motor as a function of supply frequency. The output torque is given as a percentage of the motor's nominal torque.

The most convenient method to dimension the motor is to utilize ABB's DriveSize program. This tool can be downloaded from the ABB website (www.abb.com/motors&generators)

The loadability curves are based on nominal supply voltage.

Note: the maximum speed of the motor must not be exceeded even if the loadability curves extend to 100 Hz.

2.3 Thermal dimensioning with ABB ACS550 converters

In the case of ABB ACS550 converters, dimensioning can be done using the loadability curves in Figures 4 and 5. Also for

ACS550 driven applications, the most convenient method to dimension the motor is to utilize ABB's DriveSize program.

Note 1. The loadability curves in Figures 4 and 5 are based on 4 kHz switching frequency.

Note 2. For constant torque applications the lowest allowed continuous operating frequency is 15 Hz.

Note 3. For quadratic torque applications lowest continuous operating frequency is 5 Hz.

2.4 Thermal dimensioning with other voltage source PWM-type converters

For VSDs other than DTC-controlled ACS800 and ACS550 converters, preliminary dimensioning can be done using the loadability curves in Figures 4 and 5. The utilization of these curves assume a minimum switching frequency of 3 kHz.

To ensure safe operation, the combination must either be tested for the specific protection type or thermal sensors must be fitted to control the surface temperature. Frequencies below 15 Hz shall be avoided or tested separately.

Note: the actual thermal loadability of a motor may be lower than shown by the guideline curves.

2.5 Short time overloads

Short time overloading is usually possible with ABB flameproof motors. For the exact values, please see the motor's rating plate.

Overloadability is specified by three factors:

I_{OL} Maximum short time current

T_{OL} Length of allowed overload period

T_{COOL} Cooling time required after each overload period. During the cooling period the motor current and torque must remain below the limit of allowed continuous loadability.

3. Operating speed

When a motor is used with a frequency converter, its actual operating speed may deviate considerably from its nominal speed (i.e. the speed stamped on the rating plate). When operating at higher speeds, ensure that the highest permissible rotational speed of the motor, or the critical speed of the equipment as a whole, is not exceeded.

The permitted maximum speed must be stated on a rating plate. This can be either a separate plate or the regular plate required for variable speed drive motors.

4. Thermal protection of windings

Most ABB Ex motors are equipped with PTC thermistors to prevent the winding temperatures from exceeding the thermal limits of the insulation materials (usually Insulation Class F). Please check the product specific data in the corresponding section of this catalogue.

In countries where the ATEX requirements are in force, the thermistors must be connected to a thermistor circuit relay. The relay must function independently and reliably trip off the supply to the motor according to the requirements of the "Essential Health and Safety Requirements" in Annex II, item 1.5.1 of the ATEX Directive 94/9/EC.

In countries where the ATEX requirements are not in force, it is nevertheless recommended that the thermistors are connected to a thermistor circuit relay that functions independently and will reliably trip off the supply to the motor.

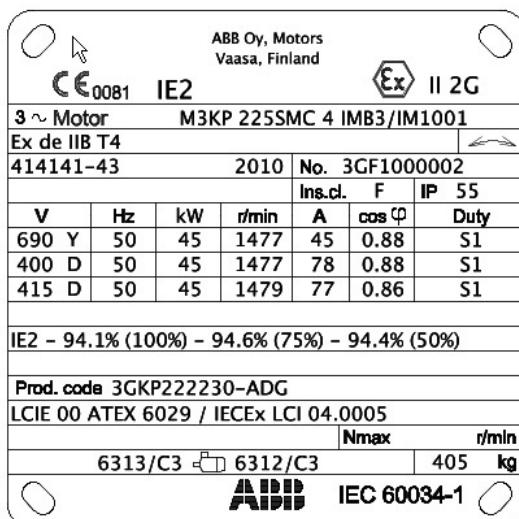

Note: local installation rules may also allow the thermistors to be connected to equipment other than a thermistor relay, such as the control inputs of a frequency converter.

Note: the above recommendations do not apply to increased safety 'e' motors.

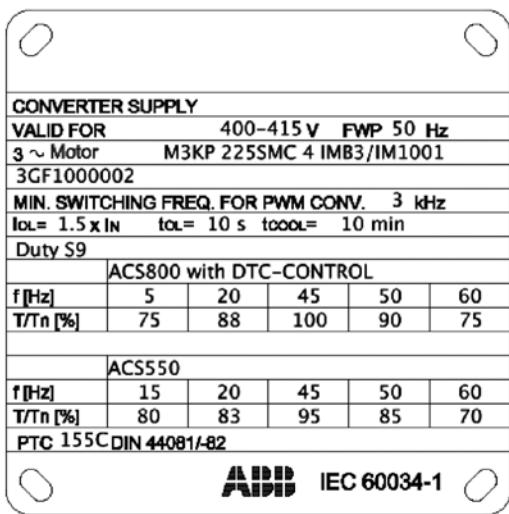

5. Rating plates

The following parameters must be shown on the rating plates of hazardous area motors intended for variable speed operation:

- speed or frequency range
- power range

M000732

M000733

- voltage range
- type of torque (constant or quadratic)
- converter type and required minimum switching frequency

These parameters shall be used while checking the suitability of a specific motor for its intended application and for setting the limits of operation for the converter.

C. Technical criteria

1. Lubrication

The effectiveness of the motor lubrication should be checked by measuring the surface temperature of the bearing endshields under normal operating conditions. For more information, see "Manual for hazardous area motors".

In continuous operation at very low speeds, as well as at low temperatures, the lubrication capabilities of standard greases may not be sufficient, making it necessary to use special greases with additives.

If the motor is equipped with sealed bearings (i.e. bearings greased for life) any deviation in the operating temperature from the design temperature will result in a change in the lifetime of the bearing.

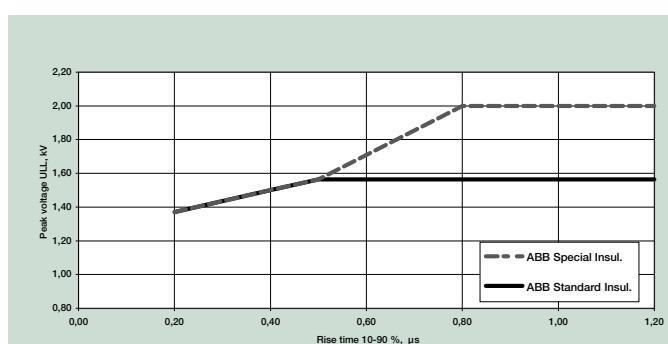

2. Winding insulation

The output voltage of voltage source frequency converters consists of steep voltage pulses. These pulses can be even higher and steeper when arriving at the motor terminals due to reflecting pulses in the cables. The motor's insulation must therefore be selected according to the actual pulses at the motor terminals.

2.1 Phase to phase voltages

The maximum allowed phase to phase voltage peaks at the motor terminals as a function of pulse rise time can be seen in Figure 1.

Figure 1. Allowed phase to phase voltage peaks at motor terminals as a function of rise time.

M000408

The highest curve ("ABB Special Insulation") applies to random wound motors with a special winding insulation for frequency converter supply, variant code 405. The "ABB Standard Insulation" curve applies to all other random wound motors covered by this catalogue.

2.2 Phase to ground voltages

The allowed phase to ground voltage peaks at the motor terminals are:

Standard Insulation 1300 V peak

Special Insulation 1800 V peak

2.3 Selection of winding insulation for ACS800 and ACS550 supplied motors

In the case of ABB ACS800 and ACS550 single drives with a diode supply unit (uncontrolled DC voltage), the motor winding insulation and frequency converter output filters can be selected using Table 2.

Table 2. Selection of motor winding insulation and converter output filters for motors used of ABB ACS800 or ACS550 drives with uncontrolled DC voltage.

Winding insulation and filters required	
$U_N \leq 500$ V	ABB Standard insulation
$U_N \leq 600$ V	ABB Standard insulation + dU/dt filters OR ABB Special insulation (variant code 405)
$U_N \leq 690$ V	ABB Special insulation (variant code 405) AND dU/dt-filters at converter output
$600 < U_N \leq 690$ V cable length > 150 m	ABB Special insulation (variant code 405)

Nominal supply voltage U_N of converter

Winding insulation and filters required

$U_N = 500$ V ABB Standard Insulation

$U_N = 600$ V ABB Standard Insulation + dU/dt filters

OR

ABB Special Insulation (variant code 405)

$U_N = 690$ V ABB Special Insulation (variant code 405)

AND

dU/dt filters at converter output

For more information on dU/dt filters, please see relevant ABB Drives catalogues.

For more information on resistor braking and converters with controlled supply units, please contact ABB.

2.4 Selection of winding insulation with all other converters

The voltage stresses must be restricted so they remain below the accepted limits. The effect of any filters that are fitted must be taken into account when dimensioning the motor.

3. Bearing currents

Bearing voltages and currents must be avoided in all variable speed applications to ensure the reliability and safety of the application. For this purpose insulated bearings or bearing constructions, common mode filters and suitable cabling and grounding methods must be used.

3.1 Elimination of bearing currents with ABB ACS800 and ACS550 converters

In the case of ABB ACS800 and ACS550 converters with a diode supply unit (uncontrolled DC voltage), the following methods must be used to avoid harmful bearing currents in the motors:

Frame size	Preventive measures
250 and smaller	No action needed
280 – 315	Insulated non-drive end bearing
355 – 450	Insulated non-drive end bearing AND Common mode filter at the converter

Common mode filters

Common mode filters reduce common mode currents and thus decrease the risk of bearing currents. Common mode filters do not significantly affect the phase or main voltages on the motor terminals. For more information, please see ABB Drives catalogues

Insulated bearings

Bearings with aluminium oxide insulated and sealed inner or outer bores are used as standard. Hybrid bearings, i.e. bearings with non-conductive ceramic rolling elements, can also be used in special applications. More information for selecting the correct parts is available on request.

3.2 Elimination of bearing currents with all other converters

The user is responsible for protecting the motor and driven equipment from harmful bearing currents. The instructions provided in section 3.1 can be followed, but their effectiveness cannot be guaranteed in all cases.

4. Cabling, grounding and EMC

The use of a frequency converter places greater demands on the cabling and grounding of the drive system. To provide proper grounding and ensure compliance with any applicable EMC requirements, motors above 30 kW shall be cabled using shielded symmetrical cables and EMC glands, i.e. cable glands providing 360° bonding. Symmetrical and shielded cables are also highly recommended for smaller motors. For motors in frame size IEC 280 and upward, additional potential equalization between the motor frame and the driven equipment is needed, unless both are mounted on a common steel base. In this case, the high frequency conductivity of the connection provided by the steel base should be checked.

More information about grounding and cabling of variable speed drives can be found in the manual "Grounding and cabling of the drive system" (Code: 3AFY 61201998) and material on fulfilling the EMC requirements can be found on respective converter manuals.

Please note that proper cable glands providing 360° bonding, or equivalent, must also be used for the converter and safety switch, if fitted.

The correct grounding of the motor and driven equipment is also necessary for the avoidance of bearing voltages and currents.

D. Loadability curves of motors for explosive atmospheres

The loadability curves shown in Figures 2 and 3 are based on type tests using ACS800 frequency converters with DTC control. The loadability curves assume that the nominal frequency of the motor (i.e. field weakening point) is 50 Hz or 60 Hz and that the motor control mode (parameter 99.04) is DTC. The DriveSize dimensioning program also utilizes the same curves.

For VSDs other than DTC-controlled ACS800 converters, preliminary dimensioning can be done using the guideline loadability curves in Figures 4 and 5.

Loadability curves with ACS800 converters utilizing DTC control

Figure 2. Flameproof motors Ex d, Ex de T4, cast iron dust ignition proof motors, (DIP/Ex tD 150°C); nominal frequency of motor 50/60 Hz

Mechanical design

Drain holes

Flameproof Ex d motors are provided without drain holes as standard.

Drain holes with certified metal plugs are available as an option. Please see variant code section.

Type of protection	Frame material	Frame size	Drain holes
Flameproof	Cast iron	80-400	not included
		160-400	optional

M000707

Terminal box standard delivery

Terminal boxes are mounted on top of the motor at D-end as standard. The terminal boxes of motor sizes 80-250 can be turned 4x90° and in motor sizes 280-400 2x180° after delivery. When ordering Exd motors in sizes 280-400 with 4x90°, the position of the terminal box has to be defined in the order.

The degree of protection of standard terminal box is IP55 and it complies with the requirements of this enclosure type and effectively prevents the transmission of an internal explosion to the surrounding, potentially explosive atmosphere.

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated non-armoured and termination parts are supplied according to the table on the following pages. To enable the supply of suitable terminations for the motor, please state cable type, quantity, size and outer diameter when ordering.

All Ex d motors are delivered as standard without cable glands. However, motors are provided with metal plugs according to the table below. Different glands can be provided separately as an option. Please see Alternatives section for details.

Note: For 500 V motor information please contact ABB!

Standard delivery 400/690 V (if nothing else informed)

Terminal box alternatives, cast iron frame

Due to the construction of Ex d terminal box it is not possible to mount any connection flanges, adapters nor cable sealing end units on this type of terminal box.

Only for the cable gland type there are some alternatives.
These can be found from the Variants section.

1. Main terminal box and maximum single core cross section

Larger than standard single core cross section is available as option according to the table below.

Please check also the capacity of the cable entry to make sure the cables fit.

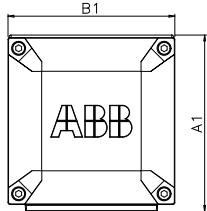

Standard terminal box	Size of opening	Max single cross section per phase mm ²
25	B	35
63	B	95
160	C	120
210	C	2 x 240
370	D	2 x 300
750	E	4 x 500

The accessories for using the maximum single core cross sections are not included as standard. For this option please use variant code 300 (Increased single core cross section). Each terminal has got limited maximum cable entry size, please request if necessary.

Permissible loadings on the shaft end

The following tables give the permissible radial and axial forces in Newton, assuming only radial or axial force is applied. Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to ISO 281:1990/Amd 2:2000 standard theory, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table below.

The values are based on normal conditions at 50 Hz. At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed.

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

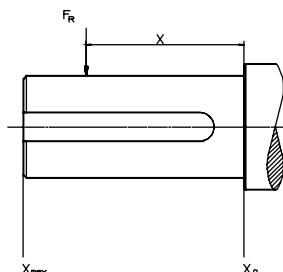

If flameproof motors Ex d sizes 160 and above are subject to high radial forces (e.g. belt drive) they should be fitted with roller bearings. Permissible radial forces for IIB and IIC are available from ABB on request.

Please note that motors type Ex d and IIC in size 250 and above with roller bearings may require detailed information about power transmission; please consult ABB.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X_0} - \frac{X}{E} (F_{X_0} - F_{X_{max}})$$

E = length of shaft extension in basic version

Rating plates

The rating plates are in table form giving values for speed, current and power factor for three voltages: 400V-415V-690V as standard. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

The following information will be shown on the motor rating plate according to IEC 60034-30:2008:

- Lowest nominal efficiency at 100%, 75% and 50% rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number (both ATEX and IECEx are stamped on the rating plate as standard)

Motor sizes 80-400

Ordering information

Sample order

When placing an order, please state the following minimum data in the order, as in example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3JP 160 MLA
Pole number	2
Mounting arrangement (IM code)	IM B3 (IM 1001)
Rated output	11 kW
Product code	3GJP161410-ADH
Variant codes if needed	

Motor size

A	B	C	D.E.F.	G
M3JP 160 MLA 3GJP 161 410 - A D H 002 etc.				
			1 2 3 4 5 6 7 8 9 10 11 12 13 14	
A Motor type	C Product code	E Voltage and frequency code		G Variant codes
B Motor size	D Mounting arrangement code	F Generation code		

Explanation of the product code:

Positions 1 - 4

3GJP = Totally enclosed frameproof motor E xd with cast iron frame

Positions 5 and 6

IEC-frame size

08 = 80	20 = 200
09 = 90	22 = 225
10 = 100	25 = 250
11 = 112	28 = 280
13 = 132	31 = 315
16 = 160	35 = 355
18 = 180	40 = 400

Position 7

Speed (pole pairs)

1 = 2 poles	4 = 8 poles	7 ≥12 poles
2 = 4 poles	5 = 10 poles	8 = Two-speed motors
3 = 6 poles	6 = 12 poles	9 = Multi-speed motors

Position 8-10

Running number series

Position 11

- (Dash)

Position 12

Mounting arrangement

A = Foot-mounted, top mounted terminal box
R = Foot-mounted, terminal box RHS seen from D-end
L = Foot-mounted, terminal box LHS seen from D-end
B = Flange-mounted, large flange with clearance holes
C = Flange-mounted, small flange with tapped holes
V = Flange-mounted, Special flange
H = Foot/flange-mounted, large flange with clearance holes
J = Foot/flange-mounted, small flange with tapped holes
S = Foot/flange-mounted, terminal box RHS seen from D-end
T = Foot/flange-mounted, terminal box LHS seen from N-end
F = Foot/flange-mounted, special flange

Position 13

Voltage and frequency

Single-speed motors

B 380 VΔ 50 Hz

D 400 VΔ, 415 VΔ, 690 VY 50 Hz

E 500 VΔ 50 Hz

F 500 VY 50 Hz

S 230 VΔ, 400 VY, 415 VY 50 Hz

T 660 VΔ 50 Hz

U 690 VΔ 50 Hz

X Other rated voltage, connection or frequency, 690 V maximum

Position 14

Generation code G/H

Generation code is followed by variant codes according to the hazardous area, see below and on corresponding pages with variant codes:

461 Ex d(e) design, Group IIC

Flameproof cast iron motors Ex d IIB/IIC T4

Technical data for totally enclosed squirrel cage three phase motors

¹⁾ Temperature rise class F

²⁾ Efficiency class IE1

³⁾ 3dB(A) sound pressure level reduction with unidirectional fan construction. Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁴⁾ Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁵⁾ For 400-415 V 50 Hz (380 V 50 Hz voltage code B)

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method.
ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

Flameproof motors Ex d IIB/IIC T4 variant codes

1 ATTESTATION D'EXAMEN CE DE TYPE

1 EC TYPE EXAMINATION CERTIFICATE

2 Appareil ou système de protection destiné à être utilisé en atmosphères explosives (Directive 94/9/CE)

3 Numéro de l'attestation d'examen CE de type
LCIE 09 ATEX 3004 X

4 Appareil ou système de protection :
Moteur asynchrone
Type : M3JP160 ..., M3KP160 ..., M3JC160 ..., M3KC160 ... (Génération H)

5 Demandeur : ABB Oy Motors
Adresse : Strombergin Puistotie 5A FIN - 65101 VAASA - Finland

6 Fabricant : ABB Oy Motors
Adresse : Strombergin Puistotie 5A FIN - 65101 VAASA - Finland

7 Cet appareil ou système de protection et ses variantes éventuelles accessoires sont décrits dans l'annexe de la présente attestation et dans les documents descriptifs cités en référence.

8 Le LCIE, organisme notifié sous la référence 0081 conformément à l'article 9 de la directive 94/9/CE du Parlement européen et du Conseil du 23 mars 1994, certifie que cet appareil ou système de protection répond aux exigences essentielles de sécurité et de santé pour la conception et la construction d'appareils et de systèmes de protection destinés à être utilisés en atmosphères explosives conformément à la norme EN 60079-0.

Les résultats des vérifications et essais figurent dans le rapport confidentiel N° 62627-577197-01.

9 Le respect des exigences essentielles de sécurité et de santé est assuré par la manière à :

- EN 60079-0 (2006) - EN 61241-0 (2006)
- EN 60079-1 (2007) - EN 61241-1 (2004)
- EN 60079-7 (2007) - EN 61241-7 (2004)

10 Le signe X lorsqu'il est placé à la suite du numéro de l'attestation, indique que cet appareil ou système de protection est soumis aux conditions spéciales pour une utilisation sûre, mentionnées dans l'annexe de la présente attestation.

11 Cette attestation d'examen CE de type concerne uniquement la conception et la construction de l'appareil ou du système de protection spécifié, conformément à l'annexe III de la directive 94/9/CE.

Ces exigences sont basées sur les normes de la directive dont application pour la fabrication et la fourniture de l'appareil ou du système de protection. Ces dernières ne sont pas couvertes par la présente attestation.

12 La marquage de l'appareil ou du système de protection doit comporter les informations détaillées au point 15.

Fontenay-aux-Roses, le 23 février 2009

ABB

EC Declaration of Conformity

The Manufacturer: ABB Oy
Motors
P.O. Box 633
Strömbärgin puistotie 5A
FIN - 65101 Vaasa, Finland

hereby declares that

the products: 3-phase induction motors, series M2GP, M3JP, M3JC, M3KP, M3KC, M3GP, M3HP and M3LP; as listed on page 2 in this document, fulfil provisions of the relevant Council Directives.

Directive 94/9/EC (ATEX of 23rd March 1994)

by applying the following harmonized standards:

EN 60079-0 (2006), EN 60079-1 (2007), EN 60079-7 (2007), EN 60079-15 (2005), EN 61241-0 (2006), EN 61241-1 (2004).

ABB Oy Motors declare on it's sole responsibility,

- that the state of the art of these standards do not modify the result of the assessment carried out by LCIE which issued the EC type examination certificates according to former editions of the standard series.
- that listed motors conform to the requirements of annex II of the directive 94/9/EC clause 1.2.7 by applying the standards series EN 60034.

Directive 2005/32/EC (EuP of 6th July 2005)

by fulfilling the requirements of the standard EN 60034-30 (March 2009) in respect of the efficiency class.

Note: When installing motors for converter supply applications additional requirements must be respected regarding the motor as well as the installation, as described in the appropriate dedicated addendum.

Signed by 

Jouni Ikkahimo
Product Development Manager

Mechanical design

Drain holes

Flameproof Ex de motors are provided without drain holes as standard.

Drain holes with certified metal plugs are available as an option. Please see variant code section.

Type of protection	Frame material	Frame size	Drain holes
Flameproof	Cast iron	80-400	not included
		160-400	optional

Terminal box standard delivery

Terminal boxes are mounted on top of the motor at D-end as standard. The terminal boxes of motor sizes 80-355 can be turned 4x90° and in motor sizes 400 2x180° after delivery. When ordering Ex de motors in sizes 280-400 with 4x90°, the position of the terminal box has to be defined in the order.

The degree of protection of standard terminal and it complies with the requirements of this enclosure type and effectively prevents all ignition sources such as sparks, excessive overheating etc. The features of the terminal box are : no selfloosening terminals, compliance with creepage distances and clearances specified in standards.

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated non-armoured and termination parts are supplied according to the table on the following pages.

Standard delivery 400/690 V (if nothing else informed)

Terminal box alternatives, cast iron frame

Optional adapters

There is a broad selection of cable termination accessories available to allow termination of one or several cables. The most common ones are explained below, for other options please contact ABB.

Main terminal box

Adapters

Cable sealing end units,
flange and glands

M000443

How to order?

- Check first that the terminalbox can allow mounting of the cable and cores (refer to motor type and terminal box type cross reference page 61).
- If very large cables are used might it be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) depending on outer diameter of the cable(s).
- Select a appropriate adapter and gland(s) and gland plate or cable sealing end unit.
- Note that turning the terminal box to a non standard position might limit the use of some adapters.

Ordering example

Motor	200 kW, 4 pole, 400 V 50 Hz,
Cables	cables needed: 2 pieces, outer diameter 58 mm, single cross section 185mm, cables coming from below
Needed one terminal box for anticondensation heaters (220V)and another for temperature detectors, terminal box material cast iron.	
Motor	M3KP 315 MLA 4, B3
Adapter	D-D (variant code 293)
Cable sealing end unit	Variant code 278
Auxiliaries	Variant codes 451, 380, 567, 568

1. Main terminal box and maximum single core cross section

Larger than standard single core cross section is available as option according to the table below. Also one size larger terminal box can be selected. Please check also the capacity of the cable entry to make sure the cables fit.

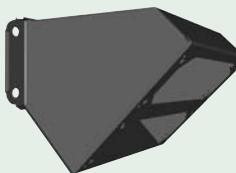

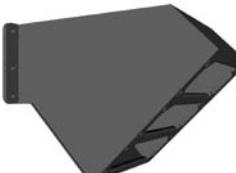

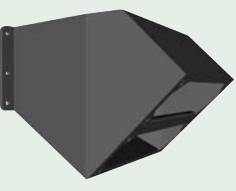

Standard terminal box	Size of opening	Max single cross section per phase mm ²	Variant code 019 larger terminal box than standard	Size of opening with larger terminal box than standard	Max single cross section per phase mm ²
25	B	35	-	-	-
63	B	95	-	-	-
160	C	120	-	-	-
210	C	2 x 240	370	D	2 x 300
370	D	2 x 300	750	E	4 x 500
750	E	4 x 500	1200	E	4 x 500

The accessories for using the maximum single core cross sections are not included as standard. For this option please use variant code 300 (Increased single core cross section). Each terminal has got limited maximum cable entry size, please request if necessary.

2. Optional adapters

To allow easy termination of cables entering the terminal box from above or below it is recommended to use an angle adapter.

These can also be used to allow mounting of several cable sealing end units or gland plates on the terminal box for termination of more cables than one cable sealing end unit or gland plate can allow.

Adapter	Variant code	Opening towards terminal box	Glandplate or opening for cable sealing end unit	Material	Notes
	292 M000430	C	C	Steel	
	293 M000431	D	D	Steel	
	294 M000432	E	D	Steel	Included in std delivery with 750 type terminal box
	295 M000433	E	2 pcs E	Steel	Only possible on terminal box 1200
	296 M000434	E	3 pcs D	Steel	Only possible on terminal box 1200
	444 M000435	E	2 pcs D	Steel	Included in std delivery with 1200 type terminal box

Note: Black painted steel

3. Glandplate, maximum size of glands and material

Glandplates delivered blind or be drilled and tapped to accomodate glands to suit the cable diameter and amount of glands needed.

Standard gland plate material is siluminium, painted steel or stainless steel are available as options.

Size	Maximum size and number of glands, metric		
C	2xM90	3xM50	7xM32
D	4xM90	4xM63	7xM50
E	6xM90	7xM63	9xM50

Related variant codes:

- 729 Cable flanges without holes / Blank gland plates.
- 730 Prepared for NPT glands
- 732 Standard cable gland, Ex d IIB, armoured cable.
- 733 Standard cable gland, Ex d IIB, non-armoured cable.
- 743 Painted steel, blind
- 744 Stainless steel, blind
- 745 Painted steel with brass glands
- 746 Stainless steel with brass glands

4. Cable glands and cable sealing end units

Cable glands

Table below shows the selection of cable gland types and possible cable outer diameter of each size.

Outer diameter, mm			
	Variant code 745 Painted steel flange equipped with brass cable glands	Variant code 737 Standard cable gland Ex e with clamping device acc. to EN-Standards	Variant code 704 EMC cable gland
Motor sizes 80-400:

M63	32-49	32-49	32-49
M75	46-60	NA	NA
M90	55-70	NA	NA

For armoured and NPT cable glands please contact ABB.

Cable sealing end unit

As an alternative to flanges and cable glands, cable sealing units can be used. These allow more space for spreading the cores for easy terminating on the terminals.

Cable sealing end units have rubber sealed entries for one or two main cables. In addition are there two M20 plugged holes for auxillary cables.

M000437

Variant code	Opening towards terminal box	Cable outer diameter mm	Cable entry auxiliary cable	Accessories
M000436	277	C 1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Variant code 704; EMC cable gland Optional Optional

M000438	279	D 1 or 2 pcs 60-80 mm *)	2 pcs M20 plugged holes	Optional Optional

*) Depending on how the cable seal inside the cable sealing end unit is used also 40-52mm is available.

5. Auxillary terminal box

It's possible to equip the motors from frame size 160 upwards with one or several auxillary terminal boxes for connection of auxiliaries like heaters or temperature detectors.

The standard auxillary terminal box is made of aluminium and equipped with M20 glands for entry of the connection cables. As an option cast iron terminal box is available.

Connection terminals are spring loaded type for quick and easy connection. These are suitable for up to 2,5mm² wires. Auxillary terminal boxes are equipped with an earthing terminal.

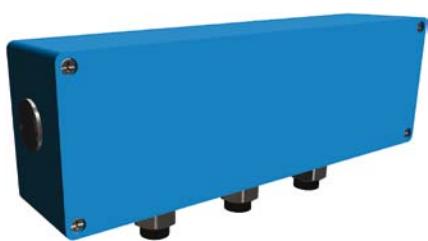

As standard the first auxillary terminal box is located on RHS seen from D-end.

Small, aluminum auxillary terminal box
(80 x 125 mm, for max 12 wires)
Earthing size M4

M000439

Large, aluminum auxillary terminal box
(80 x 250 mm, for max 30 wires)
Earthing M4

M000440

Cast iron auxiliary terminal box
(211 x 188 mm, for max 30 wires)
Earthing M6

M000441

Standard cable entry size M20. Number of entries depends on the terminal box type and number of selected auxiliaries.

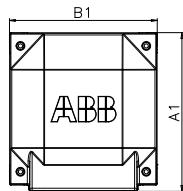

Related variant codes:

Permissible loadings on the shaft end

The following tables give the permissible radial and axial forces in Newton, assuming only radial or axial force is applied. Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to ISO 281:1990/Amd 2:2000 standard theory, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table below.

The values are based on normal conditions at 50 Hz. At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed.

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

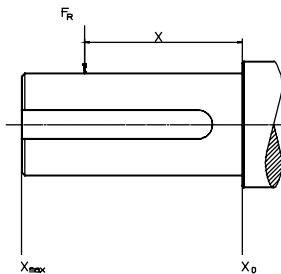

If flameproof motors Ex de sizes 160 and above are subject to high radial forces (e.g. belt drive) they should be fitted with roller bearings. Permissible radial forces for IIB and IIC are available from ABB on request.

Please note that motors type Ex de IIB and IIC in size 250 and above with roller bearings may require detailed information about power transmission; please consult ABB.

If the radial force is applied between points X_0 and X_{\max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{x_0} - \frac{X}{E} (F_{x_0} - F_{x_{\max}})$$

E = length of shaft extension in basic version

Rating plates

The rating plates are in table form giving values for speed, current and power factor for three voltages: 400V-415V-690V as standard. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

The following information will be shown on the motor rating plate according to IEC 60034-30:2008:

- Lowest nominal efficiency at 100%, 75% and 50% rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number (both ATEX and IECEEx are stamped on the rating plate as standard)

Ordering information

Sample order

When placing an order, please state the following minimum data in the order, as in example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3KP 160 MLA
Pole number	2
Mounting arrangement (IM code)	IM B3 (IM 1001)
Rated output	11 kW
Product code	3GKP161410-ADH
Variant codes if needed	

Motor size

A	B	C	D.E.F.	G
M3KP 160 MLA 3GKP 161 410 - A D H 002 etc.				
			1 2 3 4 5 6 7 8 9 10 11 12 13 14	
A Motor type	C Product code		E Voltage and frequency code	G Variant codes
B Motor size	D Mounting arrangement code		F Generation code	

Explanation of the product code:

Positions 1 - 4

3GKP = Totally enclosed flameproof motor Ex de with cast iron frame

Positions 5 and 6

IEC-frame size

08 = 80	20 = 200
09 = 90	22 = 225
10 = 100	25 = 250
11 = 112	28 = 280
13 = 132	31 = 315
16 = 160	35 = 355
18 = 180	40 = 400

Position 7

Speed (pole pairs)

1 = 2 poles	4 = 8 poles	7 ≥12 poles
2 = 4 poles	5 = 10 poles	8 = Two-speed motors
3 = 6 poles	6 = 12 poles	9 = Multi-speed motors

Position 8-10

Running number series

Position 11

- (Dash)

Position 12

Mounting arrangement

A = Foot-mounted, top mounted terminal box
R = Foot-mounted, terminal box RHS seen from D-end
L = Foot-mounted, terminal box LHS seen from D-end
B = Flange-mounted, large flange with clearance holes
C = Flange-mounted, small flange with tapped holes
V = Flange-mounted, Special flange
H = Foot/flange-mounted, large flange with clearance holes
J = Foot/flange-mounted, small flange with tapped holes
S = Foot/flange-mounted, terminal box RHS seen from D-end
T = Foot/flange-mounted, terminal box LHS seen from N-end
F = Foot/flange-mounted, special flange

Position 13

Voltage and frequency

Single-speed motors
B 380 VΔ 50 Hz
D 400 VΔ, 415 VΔ, 690 VY 50 Hz
E 500 VΔ 50 Hz
F 500 VY 50 Hz
S 230 VΔ, 400 VY, 415 VY 50 Hz
T 660 VΔ 50 Hz
U 690 VΔ 50 Hz
X Other rated voltage, connection or frequency, 690 V maximum

Position 14

Generation code G/H

Generation code is followed by variant codes according to the hazardous area, see below and on corresponding pages with variant codes:

461 Ex d(e) design, Group IIC

Flameproof cast iron motors Ex de IIB/IIC T4

IE2

Technical data for totally enclosed squirrel cage three phase motors

IP 55 - IC 411 - Insulation class F, temperature rise class B
IE2 efficiency class according to IEC 60034-30; 2008

¹⁾ Temperature rise class F

²⁾ Efficiency class IE1

³⁾ 3dB(A) sound pressure level reduction with unidirectional fan construction. Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁴⁾ Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁵⁾ For 400-415 V 50 Hz (380 V 50 Hz voltage code B)

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

¹⁾ Temperature rise class F
²⁾ Efficiency class IE1

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current
 T_i / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method.
ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

Flameproof cast iron motors Ex de IIIB/IIC T4

Technical data for totally enclosed squirrel cage three phase motors

IP 55 - IC 411 - Insulation class F, temperature rise class B

1 ATTESTATION D'EXAMEN CE DE TYPE

- Appareil ou système de protection destiné à être utilisé en atmosphères explosives (Directive 94/9/CE)
 - Nom de l'attestation d'examen CE de type LCIE 09 ATEX 3005 X
- Appareil ou système de protection :
 - Moteur asynchrone
 - Type : M3JP180 ... M3KP180 ... M3JC180 ... M3KC180 ... (Génération H)
- Demandeur : ABB Oy Motors
Adresse : Strombergs Puistola 5A
FIN - 65101 VAASA - Finland
- Fabricant : ABB Oy Motors
Adresse : Strombergs Puistola 5A
FIN - 65101 VAASA - Finland

7 Ces appareils ou systèmes de protection et ses variantes éventuelles acceptées sont décrits dans l'annexe de la présente attestation et dans les documents descriptifs cités en référence.

- Le LCIE, organisme notifié sous la référence 0081 conformément à l'article 9 de la directive 94/9/CE du Parlement européen et du Conseil du 23 mars 1994, certifie que cet appareil ou système de protection répond aux exigences essentielles de sécurité et de santé pour la conception et la construction d'appareils et de systèmes de protection destinés à être utilisés en atmosphères explosives, conformément à l'annexe II à la directive. Les résultats des vérifications et essais sont figurant dans le rapport confidentiel n° 86267-577197-92.

- Le respect des exigences essentielles de sécurité et de santé est assuré par la conformité à :
 - EN 60079-0 (2006) - EN 61241-0 (2006)
 - EN 60079-1 (2007) - EN 61241-1 (2004)
 - EN 60079-7 (2007)

10 Le signe X (voir ci-dessus) placé à la suite du numéro de l'attestation indique que cet appareil ou système de protection est soumis aux conditions spéciales pour une utilisation sûre, mentionnées dans l'annexe de la présente attestation.

- 11 Cette attestation d'examen CE de type concerne uniquement la conception et la construction de l'appareil ou du système de protection spécifié, conformément à l'annexe III de la directive 94/9/CE et à l'annexe II à la directive. Des exigences supplémentaires de la directive sont applicables pour la fabrication et la fourniture de l'appareil ou du système de protection. Ces dernières ne sont pas couvertes par la présente attestation.

- 12 Le manquage de l'appareil ou du système de protection doit comporter les informations détaillées au point 15.

Fontenay-aux-Roses, le 23 Novembre 2009

1 EC TYPE EXAMINATION CERTIFICATE

- Equipment or protective system intended for use in potentially explosive atmospheres (Directive 94/9/EC)
- EC type examination certificate number
LCIE 09 ATEX 3005 X
- Equipment or protective system :
 - Asynchronous motor
 - Type : M3JP180 ... M3KP180 ... M3JC180 ... M3KC180 ... (Generation H)
- Applicant : ABB Oy Motors
Address : Strombergs Puistola 5A
FIN - 65101 VAASA - Finland
- Manufacturer : ABB Oy Motors
Address : Strombergs Puistola 5A
FIN - 65101 VAASA - Finland
- This equipment or protective system and any acceptable variation thereof are specified in the schedule to this certificate and the documents therein referred to.

8 LCIE, notified body number 0081 in accordance with article 9 of the Directive 94/9/EC of the European Parliament and the Council of March 23rd 1994, certifies that this equipment or protective system has been found to comply with the essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres, given in Annex II to the Directive.

The results of the verifications and tests are recorded in confidential report n° 86267-577197-92.

- 9 Compliance with the Essential Health and Safety Requirements has been assured by compliance with :
 - EN 60079-0 (2006) - EN 61241-0 (2006)
 - EN 60079-1 (2007) - EN 61241-1 (2004)
 - EN 60079-7 (2007)
- 10 If the sign X is placed after the certificate number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.
- 11 The EC type examination certificate relates only to the design and construction of this specified equipment or protective system in accordance with annex III to the directive 94/9/EC. Further requirements of the directive apply to the manufacturing process and supply of this equipment or protective system. These are not covered by this certificate.
- 12 The marking of the equipment or protective system shall conform to the requirements as detailed at 15.

ABB

EC Declaration of Conformity

The Manufacturer:

ABB Oy
Motors
P.O. Box 633
Strömbärgin puistotie 5A
FIN - 65101 Vaasa, Finland

hereby declares that

the products:

3-phase induction motors, series M2GP, M3JP, M3JC, M3KP, M3KC, M3GP, M3HP and M3LP; as listed on page 2 in this document, fulfil provisions of the relevant Council Directives:

Directive 94/9/EC (ATEX of 23rd March 1994)

by applying the following harmonized standards:

EN 60079-0 (2006), EN 60079-1 (2007), EN 60079-7 (2007), EN 60079-15 (2005), EN 61241-0 (2006), EN 61241-1 (2004).

ABB Oy Motors declare on it's sole responsibility,

- that the state of the art of these standards do not modify the result of the assessment carried out by LCIE which issued the EC type examination certificates according to former editions of the standard series.
- that listed motors conform to the requirements of annex II of the directive 94/9/EC clause 1.2.7 by applying the standards serie EN 60034.

Directive 2005/32/EC (EuP of 6th July 2005)

by fulfilling the requirements of the standard EN 60034-30 (March 2009) in respect of the efficiency class.

Note: When installing motors for converter supply applications additional requirements must be respected regarding the motor as well as the installation, as described in the appropriate dedicated addendum.

Mechanical design

Drain holes

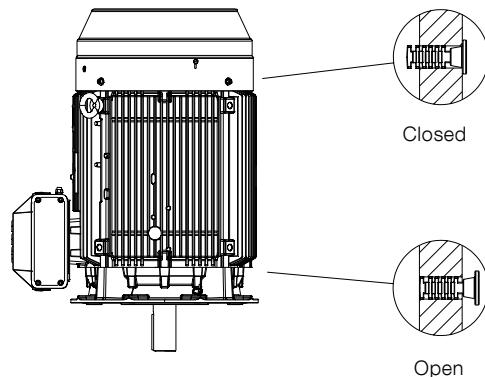

Increased safety Ex e motors in frame sizes 160-450 are fitted with drain holes and plugs as standard. Plugs are of plastic material and are delivered in open position.

Drain holes and plugs are available for frame sizes 80-132 as an option. Please see variant code section.

Terminal box standard delivery

Terminal boxes are mounted on top of the motor at D-end as standard. The terminal boxes of motor sizes 80-355 can be turned 4x90° and in motor sizes 400 2x180° after delivery. When ordering Ex e motors in sizes 280-400 with 4x90°, the position of the terminal box has to be defined in the order.

The degree of standard terminal box is IP55 and it complies with the requirements of this enclosure type and effectively prevents all ignition sources such as sparks, excessive overheating etc. The features of the terminal box are : no selfloosening terminals, compliance with creepage distances and clearances specified in standards.

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated non-armoured and termination parts are supplied according to the table on the following pages.

To enable the supply of suitable terminations for the motor, please state cable type, quantity, size and outer diameter when ordering.

All Ex e motors are delivered as standard with cable glands or cable sealing end units according to the below table. Different glands can be provided separately as an option. Please see Alternatives section for details.

Note: For 500 V motor information please contact ABB!

Standard delivery 400/690 V (if nothing else informed)

Terminal box alternatives, cast iron frame

Optional adapters

There is a broad selection of cable termination accessories available to allow termination of one or several cables. The most common ones are explained below, for other options please contact ABB.

How to order?

- Check first that the terminalbox can allow mounting of the cable and cores (refer to motor type and terminal box type cross reference page 91).
- If very large cables are used might it be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) depending on outer diameter of the cable(s).
- Select a appropriate adapter and gland(s) and gland plate or cable sealing end unit.
- Note that turning the terminal box to a non standard position might limit the use of some adapters.

Ordering example

Motor	145 kW, 4 pole, 400 V 50 Hz,
Cables	cables needed: 2 pieces, outer diameter 58 mm, single cross section 185mm, cables coming from below
Needed one terminal box for anticondensation heaters (220V)and another for temperature detectors, terminal box material cast iron.	
Motor	M3HP 315 MLA 4, B3
Adapter	D-D (variant code 293)
Cable sealing end unit	Variant code 278
Auxiliaries	Variant codes 451, 380, 567, 568

1. Main terminal box and maximum single core cross section

Larger than standard single core cross section is available as option according to the table below. Also one size larger terminal box can be selected. Please check also the capacity of the cable entry to make sure the cables fit.

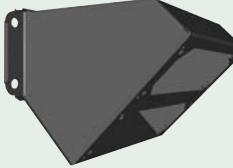

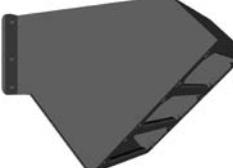

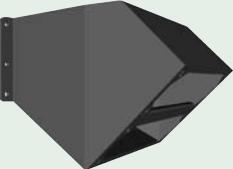

Standard terminal box	Size of opening	Max single cross section per phase mm ²	Variant code 019 larger terminal box than standard	Size of opening with larger terminal box than standard	Max single cross section per phase mm ²
25	B	35	-	-	-
63	B	95	-	-	-
160	C	120	-	-	-
210	C	2 x 240	370	D	2 x 300
370	D	2 x 300	750	E	4 x 500
750	E	4 x 500	1200	E	4 x 500

The accessories for using the maximum single core cross sections are not included as standard. For this option please use variant code 300 (Increased single core cross section). Each terminal has got limited maximum cable entry size, please request if necessary.

2. Optional adapters

To allow easy termination of cables entering the terminal box from above or below is it recommended to use an angle adapter.

These can also be used to allow mounting of several cable sealing end units or gland plates on the terminal box for termination of more cables than one cable sealing end unit or gland plate can allow.

Adapter	Variant code	Opening towards terminal box	Glandplate or opening for cable sealing end unit	Material	Notes
	292 M000430	C	C	Steel	
	293 M000431	D	D	Steel	
	294 M000432	E	D	Steel	Included in std delivery with 750 type terminal box
	295 M000433	E	2 pcs E	Steel	Only possible on terminal box 1200
	296 M000434	E	3 pcs D	Steel	Only possible on terminal box 1200
	444 M000435	E	2 pcs D	Steel	Included in std delivery with 1200 type terminal box

Note: Black painted steel

3. Glandplate, maximum size of glands and material

Glandplates delivered blind or be drilled and tapped to accomodate glands to suit the cable diameter and amount of glands needed.

Standard gland plate material is siluminium, painted steel or stainless steel are available as options.

Size	Maximum size and number of glands, metric		
C	2xM90	3xM50	7xM32
D	4xM90	4xM63	7xM50
E	6xM90	7xM63	9xM50

Related variant codes:

- 729 Cable flanges without holes / Blank gland plates.
- 730 Prepared for NPT glands
- 732 Standard cable gland, Ex d IIB, armoured cable.
- 733 Standard cable gland, Ex d IIB, non-armoured cable.
- 743 Painted steel, blind
- 744 Stainless steel, blind
- 745 Painted steel with brass glands
- 746 Stainless steel with brass glands

4. Cable glands and cable sealing end units

Cable glands

Table below shows the selection of cable gland types and possible cable outer diameter of each size.

Outer diameter, mm			
	Variant code 745 Painted steel flange equipped with brass cable glands	Variant code 737 Standard cable gland Ex e with clamping device acc. to EN-Standards	Variant code 704 EMC cable gland
Motor sizes 80-450:

M63	32-49	32-49	32-49
M75	46-60	NA	NA
M90	55-70	NA	NA

For armoured and NPT cable glands please contact ABB.

Cable sealing end unit

As an alternative to flanges and cable glands, cable sealing units can be used. These allow more space for spreading the cores for easy terminating on the terminals.

Cable sealing end units have rubber sealed entries for one or two main cables. In addition are there two M20 plugged holes for auxillary cables.

M000437

Variant code	Opening towards terminal box	Cable outer diameter mm	Cable entry auxiliary cable	Accessories
277	C	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Variant code 704; EMC cable gland Optional Variant code 231; Standard cable gland with clamping device
278	D	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Optional Optional
279	D	1 or 2 pcs 60-80 mm *)	2 pcs M20 plugged holes	Optional Optional

*) Depending on how the cable seal inside the cable sealing end unit is used also 40-52mm is available.

5. Auxillary terminal box

It's possible to equip the motors from frame size 160 upwards with one or several auxillary terminal boxes for connection of auxiliaries like heaters or temperature detectors.

The standard auxillary terminal box is made of aluminium and equipped with M20 glands for entry of the connection cables. As an option cast iron terminal box is available.

Connection terminals are spring loaded type for quick and easy connection. These are suitable for up to 2,5mm² wires. Auxillary terminal boxes are equipped with an earthing terminal.

As standard the first auxillary terminal box is located on RHS seen from D-end.

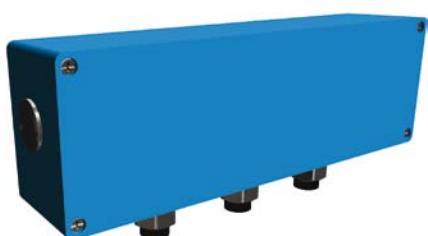

Related variant codes:

- | | |
|-----|---|
| 418 | Separate terminal box for auxillaries, standard material (all connections of temperature detectors and heaters will be put in same box) |
| 380 | Separate terminal box for temperature detectors, standard material |
| 568 | Separate terminal box for heating elements, standard material |
| 569 | Separater terminal box for brakes, standard material |
| 567 | Separate terminal box material: Cast iron |

**Small, aluminum auxillary terminal box
(80 x 125 mm, for max 12 wires)
Earthing size M4**

**Large, aluminum auxillary terminal box
(80 x 250 mm, for max 30 wires)
Earthing M4**

**Cast iron auxillary terminal box
(211 x 188 mm, for max 30 wires)
Earthing M6**

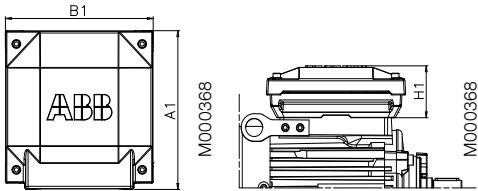

Standard cable entry size M20. Number of entries depends on the terminal box type and number of selected auxiliaries.

Terminal box according to VIK:

Permissible loadings on the shaft end

The following tables give the permissible radial and axial forces in Newton, assuming only radial or axial force is applied. Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to ISO 281:1990/Amd 2:2000 standard theory, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table below.

The values are based on normal conditions at 50 Hz. At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed.

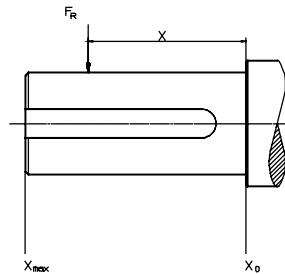

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt drive applications.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{x0} - \frac{X}{E} (F_{x0} - F_{x_{max}})$$

E = length of shaft extension in basic version

¹⁾ On request

Rating plates

The rating plates are in table form giving values for speed, current and power factor for one voltage: 400V as standard. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

The following information will be shown on the motor rating plate according to IEC 60034-30:2008:

- Lowest nominal efficiency at 100%, 75% and 50% rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number: ATEX
- I_A/I_N
- t_E

Ordering information

Sample order

When placing an order, please state the following minimum data in the order, as in example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3HP 160 MLB
Pole number	2
Mounting arrangement (IM code)	IM B3 (IM 1001)
Rated output	8 kW
Product code	3GHP161420-ADE
Variant codes if needed	

Motor size

A	B	C	D.E.F.	G
M3HP 160 MLB 3GHP 161420 - A D H 002 etc.				
			1 2 3 4 5 6 7 8 9 10 11 12 13 14	
A Motor type	C Product code	E Voltage and frequency code		G Variant codes
B Motor size	D Mounting arrangement code	F Generation code		

Explanation of the product code:

Positions 1 to 4

3GHP = Totally enclosed fan cooled squirrel cage motor with cast iron frame,
increased safety

Positions 5 and 6

IEC-frame

08 = 80	20 = 200
09 = 90	22 = 225
10 = 100	25 = 250
11 = 112	28 = 280
13 = 132	31 = 315
16 = 160	35 = 355
18 = 180	40 = 400

Position 12

Mounting arrangement

A = Foot-mounted, top-mounted terminal box
R = Foot-mounted, terminal box RHS seen from D-end
L = Foot-mounted, terminal box LHS seen from D-end
B = Flange-mounted, large flange
C = Flange-mounted, small flange (sizes 90 to 132)
H = Foot- and flange-mounted, terminal box top-mounted
J = Foot- and flange-mounted, small flange with tapped holes
S = Foot- and flange-mounted, terminal box RHS seen from D-end
T = Foot- and flange-mounted, terminal box LHS seen from D-end
V = Flange-mounted, special flange
F = Foot- and flange-mounted. Special flange

Position 7

Speed (Pole pairs)

1 = 2 poles
2 = 4 poles
3 = 6 poles
4 = 8 poles

Position 13

Voltage and frequency

Single-speed motors
B 380 VΔ 50 Hz
D 400 VΔ, 415 VΔ, 690 VY 50 Hz
E 500 VΔ 50 Hz
F 500 VY 50 Hz
S 230 VΔ, 400 VY, 415 VY 50 Hz
T 660 VΔ 50 Hz
U 690 VΔ 50 Hz
X Other rated voltage, connection or frequency, 690 V maximum

Position 8 to 10

Serial number

Position 11

- (dash)

Position 14

Generation code

G, H...

The product code must be, if needed, followed by variant codes.

Increased safety cast iron motors Ex e II T3

Technical data for totally enclosed squirrel cage three phase motors, acc. to EN

¹⁾ 3dB(A) sound pressure level reduction with unidirectional fan construction. Direction of rotation must be stated when ordering, see variant codes 044 and 045

²⁾ Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045

³⁾ Missing data on request

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

¹⁾ Missing data on request

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

ATTESTATION D'EXAMEN CE DE TYPE

EC TYPE EXAMINATION CERTIFICATE

1 Appareil ou système de protection destiné à être utilisé en atmosphères explosives (Directive 94/9/CE)

2 Equipment or protective system intended for use in potentially explosive atmospheres (Directive 94/9/EC)

3 Numéro de l'attestation d'examen CE de type

4 LOM 09 ATEX 2023

5 Appareil ou système de protection :

Type : M3HP180... (Génération H)

Demandeur : ABB Oy Motors

Adresse : Strömbärgin Puistotie 5A
FIN - 65101 VAASTA - Finland

6 Fabricant : ABB Oy Motors

Adresse : Strömbärgin Puistotie 5A
FIN - 65101 VAASTA - Finland

7 Cet appareil ou système de protection et ses variantes éventuelles acceptées sont décrits dans l'annexe de la présente attestation et dans les documents descriptifs cités en référence.

8 Le LCIE, organisme notifié sous la référence 0081 conformément au tableau 1 de la directive 94/9/CE, déclare que cet appareil ou système de protection est conforme aux exigences essentielles de sécurité et de santé pour la conception et la fabrication d'appareils et de systèmes de protection destinés à être utilisés dans atmosphères explosives, données dans l'annexe II de la directive. Les résultats des vérifications et essais figurent dans le rapport confidentiel N° 91307-582851.

9 Le respect des exigences essentielles de sécurité et de santé est assuré par la conformité à :

- EN 60079-0 (2006)
- EN 60079-7 (2007)
- EN 61241-0 (2006)
- EN 61241-1 (2004)

10 Le signe suivant placé à la suite du numéro de l'attestation, indique que cet appareil ou système de protection est soumis aux conditions spéciales pour une utilisation sûre, mentionnées dans l'annexe de la présente attestation.

11 Cette attestation d'examen CE de type concerne uniquement la conception et la construction de l'appareil ou du système de protection spécifique, conformément à l'annexe III de la directive 94/9/CE.

Des exigences supplémentaires de la directive sont applicables pour la fabrication et la fourniture de l'appareil ou du système de protection. Ces dernières ne sont pas couvertes par la présente attestation.

12 La marquage de l'appareil ou du système de protection doit comporter les informations détaillées au point 15.

ABB

EC Declaration of Conformity

The Manufacturer: ABB Oy
Motors
P.O. Box 633
Strömbärgin Puistotie 5A
FIN - 65101 Vaasa, Finland

hereby declares that

the products: 3-phase induction motors, series M2GP, M3JP, M3JC, M3KP, M3KC, M3GP, M3JP and M3LP, as listed on page 2 in this document, fulfil provisions of the relevant Council Directives:

Directive 94/9/EC (ATEX of 23rd March 1994)

by applying the following harmonized standards:

EN 60079-0 (2006), EN 60079-1 (2007), EN 60079-7 (2007), EN 60079-15 (2005), EN 61241-0 (2006), EN 61241-1 (2004).

ABB Oy Motors declare on it's sole responsibility,

- that the state of the art of these standards do not modify the result of the assessment carried out by LCIE which issued the EC type examination certificates according to former editions of the standard series.
- that listed motors conform to the requirements of annex II of the directive 94/9/EC clause 1.2.7 by applying the standards serie EN 60034.

Directive 2005/32/EC (EuP of 6th July 2005)

by fulfilling the requirements of the standard EN 60034-30 (March 2009) in respect of the efficiency class.

Note: When installing motors for converter supply applications additional requirements must be respected regarding the motor as well as the installation, as described in the appropriate dedicated addendum.

Terminal box standard delivery, cast iron frame

Terminal boxes are mounted on top of the motor at D-end as standard. The terminal boxes of motor sizes 80-355 can be turned 4x90° and in motor sizes 400 2x180° after delivery. When ordering Ex nA motors in sizes 280-400 with 4x90°, the position of the terminal box has to be defined in the order.

The degree of standard terminal box is IP55 and it complies with the requirements of this enclosure type and effectively prevents all ignition sources such as sparks, excessive overheating etc. The features of the terminal box are : no selfloosening terminals, compliance with creepage distances and clearances specified in standards.

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated non-armoured and termination parts are supplied according to the table on the following pages.

To enable the supply of suitable terminations for the motor, please state cable type, quantity, size and outer diameter when ordering.

All Ex nA motors are delivered as standard with cable glands or cable sealing end units according to the below table. Different glands can be provided separately as an option. Please see Alternatives section for details.

Note: For 500 V motor information please contact ABB!

Standard delivery 400/690 V (if nothing else is informed)

Terminal box alternatives, cast iron frame

Optional adapters

There is a broad selection of cable termination accessories available to allow termination of one or several cables. The most common ones are explained below, for other options please contact ABB.

How to order?

- Check first that the terminalbox can allow mounting of the cable and cores (refer to motor type and terminal box type cross reference page 121).
- If very large cables are used might it be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) depending on outer diameter of the cable(s).
- Select a appropriate adapter and gland(s) and gland plate or cable sealing end unit.
- Note that turning the terminal box to a non standard position might limit the use of some adapters.

Ordering example

Motor	200 kW, 4 pole, 400 V 50 Hz,
Cables	cables needed: 2 pieces, outer diameter 58 mm, single cross section 185mm, cables coming from below
Needed one terminal box for anticondensation heaters (220V)and another for temperature detectors, terminal box material cast iron.	
Motor	M3GP 315 MLA 4, B3
Adapter	D-D (variant code 293)
Cable sealing end unit	Variant code 278
Auxiliaries	Variant codes 451, 380, 567, 568

1. Main terminal box and maximum single core cross section

Larger than standard single core cross section is available as option according to the table below. Also one size larger terminal box can be selected. Please check also the capacity of the cable entry to make sure the cables fit.

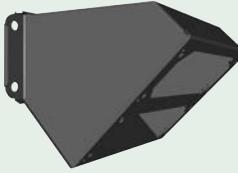

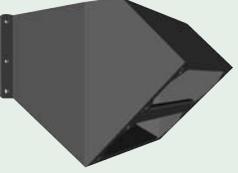

Standard terminal box	Size of opening	Max single cross section per phase mm ²	Variant code 019 larger terminal box than standard	Size of opening with larger terminal box than standard Variant code 019	Max single cross section per phase mm ²
25	B	35	-	-	-
63	B	95	-	-	-
160	C	120	-	-	-
210	C	2 x 240	370	D	2 x 300
370	D	2 x 300	750	E	4 x 500
750	E	4 x 500	1200	E	4 x 500
1200	E	4 x 500	NA	NA	NA

The accessories for using the maximum single core cross sections are not included as standard. For this option please use variant code 300 (increased single core cross section). Each terminal has got limited maximum cable entry size, please request if necessary.

2. Optional adapters

To allow easy termination of cables entering the terminal box from above or below is it recommended to use an angle adapter.

These can also be used to allow mounting of several cable sealing end units or gland plates on the terminal box for termination of more cables than one cable sealing end unit or gland plate can allow.

Adapter	Variant code	Opening towards terminal box	Glandplate or opening for cable sealing end unit	Material	Notes
	292 M000430	C	C	Steel	
	293 M000431	D	D	Steel	
	294 M000432	E	D	Steel	Included in std delivery with 750 type terminal box
	295 M000433	E	2 pcs E	Steel	Only possible on terminal box 1200
	296 M000434	E	3 pcs D	Steel	Only possible on terminal box 1200
	444 M000435	E	2 pcs D	Steel	Included in std delivery with 1200 type terminal box

Note: Black painted steel

3. Glandplate, maximum size of glands and material

Glandplates delivered blind or be drilled and tapped to accomodate glands to suit the cable diameter and amount of glands needed.

Standard gland plate material is siluminium, painted steel or stainless steel are available as options.

Size	Maximum size and number of glands, metric		
C	2xM90	3xM50	7xM32
D	4xM90	4xM63	7xM50
E	6xM90	7xM63	9xM50

Related variant codes:

- 729 Cable flanges without holes / Blank gland plates.
- 730 Prepared for NPT glands
- 732 Standard cable gland, Ex d IIB, armoured cable.
- 733 Standard cable gland, Ex d IIB, non-armoured cable.
- 743 Painted steel, blind
- 744 Stainless steel, blind
- 745 Painted steel with brass glands
- 746 Stainless steel with brass glands

4. Cable glands and cable sealing end units

Cable glands

Table below shows the selection of cable gland types and possible cable outer diameter of each size.

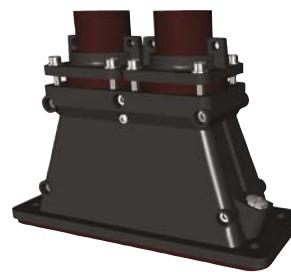

Outer diameter, mm			
	Variant code 745 Painted steel flange equipped with brass cable glands	Variant code 737 Standard cable gland Ex e with clamping device acc. to EN-Standards	Variant code 704 EMC cable gland

M75	46-60	NA	NA
M90	55-70	NA	NA

For armoured and NPT cable glands please contact ABB.

Cable sealing end unit

As an alternative to flanges and cable glands, cable sealing units can be used. These allow more space for spreading the cores for easy terminating on the terminals.

Cable sealing end units have rubber sealed entries for one or two main cables. In addition are there two M20 plugged holes for auxillary cables.

M000437

Variant code	Opening towards terminal box	Cable outer diameter mm	Cable entry auxiliary cable	Accessories
277	C	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Variant code 704; EMC cable gland Optional Variant code 231; Standard cable gland with clamping device
278	D	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Optional Optional
279	D	1 or 2 pcs 60-80 mm *)	2 pcs M20 plugged holes	Optional Optional

*) Depending on how the cable seal inside the cable sealing end unit is used also 40-52mm is available.

5. Auxillary terminal box

It's possible to equip the motors from frame size 160 upwards with one or several auxillary terminal boxes for connection of auxiliaries like heaters or temperature detectors.

The standard auxillary terminal box is made of aluminium and equipped with M20 glands for entry of the connection cables. As an option cast iron terminal box is available.

Connection terminals are spring loaded type for quick and easy connection. These are suitable for up to 2,5mm² wires. Auxillary terminal boxes are equipped with an earthing terminal.

As standard the first auxillary terminal box is located on RHS seen from D-end.

Related variant codes:

- | | |
|-----|---|
| 418 | Separate terminal box for auxillaries, standard material (all connections of temperature detectors and heaters will be put in same box) |
| 380 | Separate terminal box for temperature detectors, standard material |
| 568 | Separate terminal box for heating elements, standard material |
| 569 | Separater terminal box for brakes, standard material |
| 567 | Separate terminal box material: Cast iron |

Small, aluminum auxillary terminal box

(80 x 125 mm, for max. 12 wires)

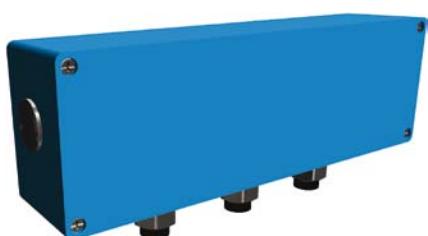

Earthing size M4

Large, aluminum auxillary terminal box

(80 x 250 mm, for max. 30 wires)

Earthing M4

Cast iron auxillary terminal box (211 x 188 mm, for max. 30 wires)

Earthing M6

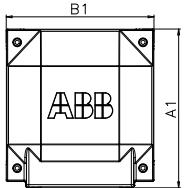

Standard cable entry size M20. Number of entries depends on the terminal box type and number of selected auxiliaries.

Terminal box alternatives, aluminum frame

Sizes 63 to 180

The terminal box is made of aluminum alloy and is located on top of the stator. The lower part of the box is integrated with the stator. It is provided with two knockout openings on each side. Sizes 132 SM_ and 160-180 also have a third smaller opening. Cable glands are not included.

Sizes 200 to 280

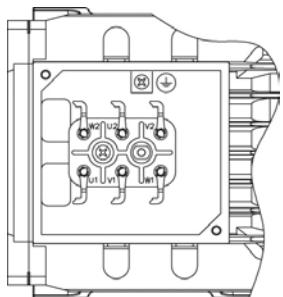

The terminal box and cover are made of deep drawn steel and mounted on top of the stator. The box is bolted to the stator and is not rotatable. The size of the box is the same for all motors.

In the basic design the terminal box is provided with two

FL 13 flange openings, one on each side. The opening on the right side, seen from the D-end, is supplied with a flange with two holes for M40 cable glands. On delivery the holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange.

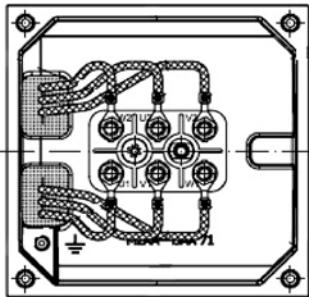

The motors can also be provided with an extra large terminal box, standard for voltage code S and frame size 280. See variant code 019 under the heading "Terminal box". This will increase the dimension HD by 32 mm. The box is supplied with two FL 21 openings. The right opening is provided with a flange with two holes for M63 cable glands. The holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange. The box can also be provided with an FL 13 opening towards the N-end.

When new motors are manufactured the terminal box can be mounted on the left or the right side. See variant codes 021 and 180 under the heading "Terminal box".

Permissible loadings on the shaft end

The following tables give the permissible radial and axial forces in Newton, assuming only radial or axial force is applied. Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to ISO 281:1990/Amd 2:2000 standard theory, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table below.

The values are based on normal conditions at 50 Hz. At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed.

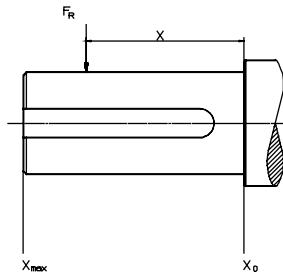

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt drive applications.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{x0} - \frac{X}{E} (F_{x0} - F_{x_{max}})$$

E = length of shaft extension in basic version

¹⁾ The maximum lifetime of the grease is 38 000 h

²⁾ The maximum lifetime of the grease is 27 000 h

³⁾ The maximum lifetime of the grease is 23 000 h

⁴⁾ The maximum lifetime of the grease is 16 000 h

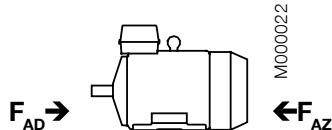

Permissible axial forces according to L₁₀ principle

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing lives of 20,000 and 40,000 hours.

At 60 Hz the values are to be reduced by 10%.

For two-speed motors, the values are to be based on the higher speed. The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces F_{AD}, assumes D-bearing locked by means of locking ring. Without locking ring the F_{AD} forces should be reduced to 70% of list value.

Aluminum motors, motor sizes 63 - 280

¹⁾ The maximum lifetime of the grease is 38 000 h.

²⁾ The maximum lifetime of the grease is 27 000 h.

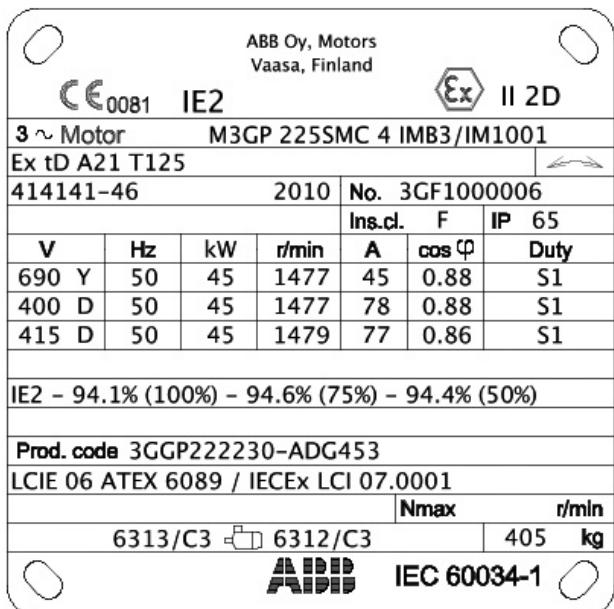

³⁾ The maximum lifetime of the grease is 23 000 h.

⁴⁾ The maximum lifetime of the grease is 16 000 h.

Rating plates

The rating plates are in table form giving values for speed, current and power factor for cast iron motors: 400V-415V-690V as standard. For aluminum motors there are one or 2 voltages in use ; 230V-400V depending on the frame size. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

M3GP 80-450

The following information will be shown on the motor rating plate according to IEC 60034-30:2008:

- Lowest nominal efficiency at 100%, 75% and 50% rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number : for cast iron motors both ATEX and IECEx are stamped on the rating plate as standard. For aluminum motors self certification.

Ordering information

Sample order

When placing an order, please state the following minimum data in the order, as in example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3GP 160 MLA
Pole number	2
Mounting arrangement (IM code)	IM B3 (IM 1001)
Rated output	11 kW
Product code	3GGP161410-ADH
Variant codes if needed	

Motor size

A _____	B _____	C _____	D.E.F. _____	G _____
M3GP 160 MLA 3GGP 161 410 - A D H 002 etc.				
1	2	3	4	5 6 7 8 9 10 11 12 13 14
A Motor type	C Product code	E Voltage and frequency code	G Variant codes	
B Motor size	D Mounting arrangement code	F Generation code		

Explanation of the product code:

Positions 1 to 4

3GGP = Totally enclosed fan cooled squirrel cage motor with cast iron frame, non-sparking

3GAA = Totally enclosed fan cooled squirrel cage motor with aluminum frame, non-sparking

Positions 5 and 6

IEC-frame

06 = 63	20 = 200
07 = 71	22 = 225
08 = 80	25 = 250
09 = 90	28 = 280
10 = 100	31 = 315
11 = 112	35 = 355
13 = 132	40 = 400
16 = 160	45 = 450
18 = 180	

Position 7

Speed (Pole pairs)

- 1 = 2 poles
- 2 = 4 poles
- 3 = 6 poles
- 4 = 8 poles
- 5 = 10 poles

Position 8 to 10

Serial number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted, top-mounted terminal box
R = Foot-mounted, terminal box RHS seen from D-end
L = Foot-mounted, terminal box LHS seen from D-end
B = Flange-mounted, large flange
C = Flange-mounted, small flange (sizes 71 to 112)
H = Foot- and flange-mounted, terminal box top-mounted
J = Foot- and flange-mounted, small flange with tapped holes
S = Foot- and flange-mounted, terminal box RHS seen from D-end
T = Foot- and flange-mounted, terminal box LHS seen from D-end
V = Flange-mounted, special flange
F = Foot- and flange-mounted. Special flange

Position 13

Voltage and frequency

Single-speed motors

B 380 VΔ 50 Hz
D 400 VΔ, 415 VΔ, 690 VY 50 Hz
E 500 VΔ 50 Hz
F 500 VY 50 Hz
S 230 VΔ, 400 VY, 415 VY 50 Hz
T 660 VΔ 50 Hz
U 690 VΔ 50 Hz
X Other rated voltage, connection or frequency, 690 V maximum

Position 14

Generation code

G, H...

The product code must be, if needed, followed by variant codes.

Non-sparking cast iron motors Ex nA

Technical data for totally enclosed squirrel cage three phase motors

¹⁾ Temperature rise class F

²⁾ Efficiency class IE1

³⁾ 3dB(A) sound pressure level reduction with unidirectional fan construction.

Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁴⁾ Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁵⁾ For 400-415 V 50 Hz (380 V 50 Hz voltage code B)

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

¹⁾ 3dB(A) sound pressure level reduction with unidirectional fan construction. Direction of rotation must be stated when ordering, see variant codes 044 and 045

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current
 T_I / T_N = Locked rotor torque
 T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

¹⁾ Temperature rise class F

²⁾ Efficiency class IE1

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

IECEx Certificate of Conformity

INTERNATIONAL ELECTROTECHNICAL COMMISSION
IEC Certification Scheme for Explosive Atmospheres

for rules and details of the IECEx Scheme visit www.iecex.com

Certificate No.:	IECEx LC1 07 0301	Issue No. 0	History
Status:	Current		
Date of Issue:	2007-01-12	Page 1 of 3	
Applicant:	ABB Oy Motors Strömbärgin Puistotie 5A P.O. Box 633 65101 VAASA Finland		
Electrical Apparatus:	M3GP80-450 & M3LP400-450 series, 13 cage induction motor types		
Optional accessory:			
Type of Protection:	Non sparking Ex nA and dust protection Ex tD.		
Marking:	Ex nA II T3, Ex tD A21/A22 T12S		
Approved for issue on behalf of the IECEx Certification Body:	Marc GILLAUX		
Position:	Ex Certification Manager		
Signature: (for printed version)			
Date:	14 JAN. 2007		
<p>1. This certificate and schedule may only be reproduced in full. 2. This certificate is not transferable and remains the property of the issuing body. 3. The status and authenticity of this certificate may be verified by visiting the Official IECEx Website.</p>			
<p>Certificate issued by: Laboratoire Central des Industries Électriques (LCIE) 33 Avenue du Général Leclerc 92260 Fontenay-aux-Roses France</p>

LCIE

1 ATTESTATION D'EXAMEN CE DE TYPE **1 EC TYPE EXAMINATION CERTIFICATE**

2 Appareil ou système de protection destiné à être utilisé en atmosphères explosives (Directive 94/9/CE) **2 Equipment or protective system intended for use in potentially explosive atmospheres (Directive 94/9/EC)**

3 Numéro de l'attestation d'examen CE de type **3 EC type examination certificate number**

LCIE 09 ATEX 3016 **LCIE 09 ATEX 3016**

4 Appareil ou système de protection :
Moteur asynchrone
Type : M3GP160 ... M3GP180 ... (Génération H)

5 Demandeur : ABB Oy Motors
Adresse : Strombergin Puistotie 5A
FIN - 65101 VAASA - Finland

6 Fabricant : ABB Oy Motors
Adresse : Strombergin Puistotie 5A
FIN - 65101 VAASA - Finland

7 Cet appareil ou système de protection et ses variantes éventuelles acceptées sont décrits dans l'annexe de la présente attestation et dans les documents descriptifs cités en référence.

8 Le LCIE organisme notifié sous la référence 0081 conformément à l'article 9 de la directive 94/9/CE du Parlement européen et du Conseil du 23 mars 1994, certifie que cet appareil ou système de protection est conforme aux exigences essentielles de sécurité et de santé pour la conception et la construction d'appareils ou de systèmes de protection destinés à être utilisés en atmosphères explosives, données dans l'annexe II de la directive. Les résultats des vérifications et essais figurent dans le rapport certificateur N° 90248-581521.

9 Le retrait des exigences essentielles de sécurité et de santé est assuré par la conformité à :
- EN 61241-0 (2006)
- EN 61241-1 (2004)

10 Le signe X lorsqu'il est placé à la suite du numéro de l'attestation, indique que cet appareil ou système de protection est soumis aux conditions spéciales pour une utilisation sûre, mentionnées dans l'annexe de la présente attestation.

11 Cette attestation d'examen CE de type concerne uniquement la conception et la construction de l'appareil ou du système de protection spécifié, conformément à l'annexe III de la directive 94/9/CE. Des exigences supplémentaires de la directive sont applicables pour la fabrication et la fourniture de l'appareil ou du système de protection. Ces dernières ne sont pas couvertes par la présente attestation.

12 Le marquage de l'appareil ou du système de protection doit comporter les informations détaillées au point 15.

Fontenay-aux-Roses, le 16 mars 2009

ABB

EC Declaration of Conformity

The Manufacturer: ABB Oy
Motors
P.O. Box 633
Strömbärgin puistotie 5A
FIN - 65101 Vaasa, Finland

hereby declares that

the products: 3-phase induction motors, series M2GP, M3JP, M3JC, M3KP, M3KC, M3CP, M3HP and M3LP, as listed on page 2 in this document, fulfill provisions of the relevant Council Directives.

Directive 94/9/EC (ATEX of 23rd March 1994)

by applying the following harmonized standards:

EN 60079-0 (2006), EN 60079-1 (2007), EN 60079-7 (2007), EN 60079-15 (2005), EN 61241-0 (2006), EN 61241-1 (2004).

ABB Oy Motors declare on its sole responsibility,

- that the state of the art of these standards do not modify the result of the assessment carried out by LCIE which issued the EC type examination certificates according to former editions of the standard series.
- that listed motors conform to the requirements of annex II of the directive 94/9/EC clause 1.2.7 by applying the standards serie EN 60034.

Directive 2005/32/EC (EuP of 6th July 2005)

by fulfilling the requirements of the standard EN 60034-30 (March 2009) in respect of the efficiency class.

Note: When installing motors for converter supply applications additional requirements must be respected regarding the motor as well as the installation, as described in the appropriate dedicated addendum.

Non-sparking motors with cast iron frame in brief, basic design

Motor size		80	90	100	112	132	160	180
Stator	Material	Cast iron, at least EN-GJL-200						
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Bearing end shields	Material	Cast iron, at least EN-GJL-200						
	Paint color shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Bearings	D-end	2-pole	6205-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C3	6208-2Z/C3	6309-2Z/C3
		4-8 -pole						
	N-end	2-pole	6204-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C3	6208-2Z/C3	6309-2Z/C3
		4-8 -pole						
Axially-locked bearings	Inner bearing cover	As standard, locked at D-end						
Bearing seal		Gamma ring						
Lubrication		Permanent grease lubrication.					Regreasable bearings	
SPM-nipples		–					As standard	
Rating plate	Material	Stainless steel						
Terminal box	Frame material	Cast iron, at least EN-GJL-200						
	Cover material	Cast iron, at least EN-GJL-200						
	Screws	Steel 8.8, zinc electroplated and chromated						
Connections	Cable entries	2xM25x1.5		2xM32x1.5			2xM40x1.5	
	Terminals	6 terminals for connection with cable lugs (not included)						
Fan	Material	Polyamide. Reinforced with glass fibre.					Polypropylene. Reinforced with glass fibre.	
Fan cover	Material	Steel					Hot dip galvanized steel	
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Stator winding	Material	Copper						
	Insulation	Insulation class F						
	Winding protection	3 pcs thermistors						
Rotor winding	Material	Pressure die-cast aluminum						
Balancing method		Half key balancing						
Key ways		Open key-way						
Heating elements	On request	25 W						
Drain holes		Optional					As standard, open on delivery	
External earthing bolt		As standard						
Enclosure		IP 55						
Cooling method		IC 411

M000178

Terminal box standard delivery, cast iron frames

Terminal boxes are mounted on top of the motor at D-end as standard. The terminal boxes of motor sizes 80-355 can be turned 4x90° and in motor sizes 400 2x180° after delivery. When ordering DIP motors in sizes 280-400 with 4x90°, the position of the terminal box has to be defined in the order.

The degree of protection of the standard terminal box is IP55 or IP65 according to the category and it complies with the requirements of this enclosure type and effectively prevents all ignition sources such as sparks, excessive overheating etc. The features of the terminal box are : no selfloosening terminals, compliance with creepage distances and clearances specified in standards.

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated non-armoured and termination parts are supplied according to the table on the following pages. To enable the supply of suitable terminations for the motor, please state cable type, quantity, size and outer diameter when ordering.

All DIP/ExtD motors are delivered as standard with cable glands or cable sealing end units according to the below table. Different glands can be provided separately as an option. Please see Alternatives section for details.

Note: For 500 V motor information please contact ABB!

Standard delivery 400/690 V (if nothing else informed)

Terminal box alternatives, cast iron frame

Optional adapters

There is a broad selection of cable termination accessories available to allow termination of one or several cables. The most common ones are explained below, for other options please contact ABB.

Main terminal box

Adapters

Cable sealing end units,
flange and glands

How to order?

- Check first that the terminalbox can allow mounting of the cable and cores (refer to motor type and terminal box type cross reference page 173).
- If very large cables are used might it be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) depending on outer diameter of the cable(s).
- Select a appropriate adapter and gland(s) and gland plate or cable sealing end unit.
- Note that turning the terminal box to a non standard position might limit the use of some adapters.

Ordering example

Motor	200 kW, 4 pole, 400 V 50 Hz,
Cables	cables needed: 2 pieces, outer diameter 58 mm, single cross section 185mm, cables coming from below
Needed one terminal box for anticondensation heaters (220V)and another for temperature detectors, terminal box material cast iron.	
Motor	M3GP 315 MLA 4, B3
Adapter	D-D (variant code 293)
Cable sealing end unit	Variant code 278
Auxiliaries	Variant codes 451, 380, 567, 568

1. Main terminal box and maximum single core cross section

Larger than standard single core cross section is available as option according to the table below. Also one size larger terminal box can be selected. Please check also the capacity of the cable entry to make sure the cables fit.

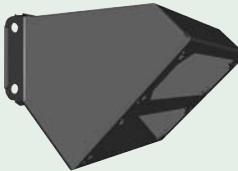

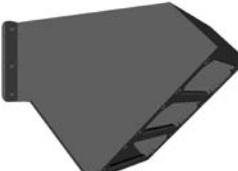

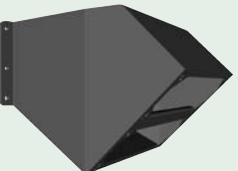

Standard terminal box	Size of opening	Max single cross section per phase mm ²	Variant code 019 larger terminal box than standard	Size of opening with larger terminal box than standard	Max single cross section per phase mm ²
25	B	35	-	-	-
63	B	95	-	-	-
160	C	120	-	-	-
210	C	2 x 240	370	D	2 x 300
370	D	2 x 300	750	E	4 x 500
750	E	4 x 500	1200	E	4 x 500

The accessories for using the maximum single core cross sections are not included as standard. For this option please use variant code 300 (Increased single core cross section). Each terminal has got limited maximum cable entry size, please request if necessary.

2. Optional adapters

To allow easy termination of cables entering the terminal box from above or below is it recommended to use an angle adapter.

These can also be used to allow mounting of several cable sealing end units or gland plates on the terminal box for termination of more cables than one cable sealing end unit or gland plate can allow.

Adapter	Variant code	Opening towards terminal box	Glandplate or opening for cable sealing end unit	Material	Notes
	292 M000430	C	C	Steel	
	293 M000431	D	D	Steel	
	294 M000432	E	D	Steel	Included in std delivery with 750 type terminal box
	295 M000433	E	2 pcs E	Steel	Only possible on terminal box 1200
	296 M000434	E	3 pcs D	Steel	Only possible on terminal box 1200
	444 M000435	E	2 pcs D	Steel	Included in std delivery with 1200 type terminal box

Note: Black painted steel

3. Glandplate, maximum size of glands and material

Glandplates delivered blind or be drilled and tapped to accomodate glands to suit the cable diameter and amount of glands needed.

Standard gland plate material is siluminium, painted steel or stainless steel are available as options.

Size	Maximum size and number of glands, metric		
C	2xM90	3xM50	7xM32
D	4xM90	4xM63	7xM50
E	6xM90	7xM63	9xM50

Related variant codes:

- 729 Cable flanges without holes / Blank gland plates.
- 730 Prepared for NPT glands
- 732 Standard cable gland, Ex d IIB, armoured cable.
- 733 Standard cable gland, Ex d IIB, non-armoured cable.
- 743 Painted steel, blind
- 744 Stainless steel, blind
- 745 Painted steel with brass glands
- 746 Stainless steel with brass glands

4. Cable glands and cable sealing end units

Cable glands

Table below shows the selection of cable gland types and possible cable outer diameter of each size.

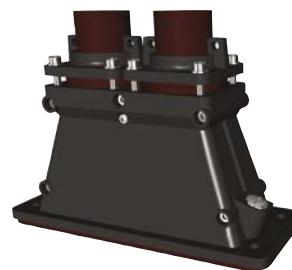

Outer diameter, mm			
	Variant code 745 Painted steel flange equipped with brass cable glands	Variant code 737 Standard cable gland Ex e with clamping device acc. to EN-Standards	Variant code 704 EMC cable gland
Motor sizes 80-450:

M63	32-49	32-49	32-49
M75	46-60	NA	NA
M90	55-70	NA	NA

For armoured and NPT cable glands please contact ABB.

Cable sealing end unit

As an alternative to flanges and cable glands, cable sealing units can be used. These allow more space for spreading the cores for easy terminating on the terminals.

Cable sealing end units have rubber sealed entries for one or two main cables. In addition are there two M20 plugged holes for auxillary cables.

M000437

Variant code	Opening towards terminal box	Cable outer diameter mm	Cable entry auxiliary cable	Accessories
277	C	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Variant code 704; EMC cable gland Optional Variant code 231; Standard cable gland with clamping device
278	D	1 or 2 pcs 48-60 mm *)	2 pcs M20 plugged holes	Optional Optional
279	D	1 or 2 pcs 60-80 mm *)	2 pcs M20 plugged holes	Optional Optional

*) Depending on how the cable seal inside the cable sealing end unit is used also 40-52mm is available.

5. Auxillary terminal box

It's possible to equip the motors from frame size 160 upwards with one or several auxillary terminal boxes for connection of auxiliaries like heaters or temperature detectors.

The standard auxillary terminal box is made of aluminium and equipped with M20 glands for entry of the connection cables. As an option cast iron terminal box is available.

Connection terminals are spring loaded type for quick and easy connection. These are suitable for up to 2,5mm² wires. Auxillary terminal boxes are equipped with an earthing terminal.

As standard the first auxillary terminal box is located on RHS seen from D-end.

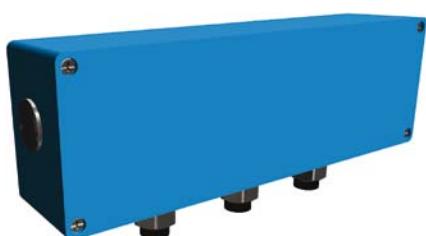

Related variant codes:

- | | |
|-----|---|
| 418 | Separate terminal box for auxillaries, standard material (all connections of temperature detectors and heaters will be put in same box) |
| 380 | Separate terminal box for temperature detectors, standard material |
| 568 | Separate terminal box for heating elements, standard material |
| 569 | Separater terminal box for brakes, standard material |
| 567 | Separate terminal box material: Cast iron |

Small, aluminum auxillary terminal box
(80 x 125 mm, for max. 12 wires)
Earthing size M4

Large, aluminum auxillary terminal box
(80 x 250 mm, for max. 30 wires)
Earthing M4

Cast iron auxillary terminal box
(211 x 188 mm, for max. 30 wires)
Earthing M6

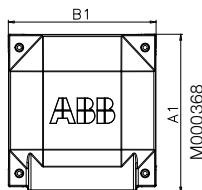

Standard cable entry size M20. Number of entries depends on the terminal box type and number of selected auxiliaries.

Terminal box alternatives, aluminum frame

Sizes 63 to 180

The terminal box is made of aluminum alloy and is located on top of the stator. The lower part of the box is integrated with the stator. It is provided with two knockout openings on each side. Sizes 132 SM_ and 160-180 also have a third smaller opening. Cable glands are not included.

Sizes 200 to 280

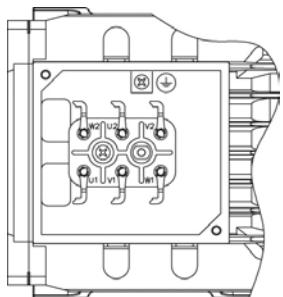

The terminal box and cover are made of deep drawn steel and mounted on top of the stator. The box is bolted to the stator and is not rotatable. The size of the box is the same for all motors.

In the basic design the terminal box is provided with two

FL 13 flange openings, one on each side. The opening on the right side, seen from the D-end, is supplied with a flange with two holes for M40 cable glands. On delivery the holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange.

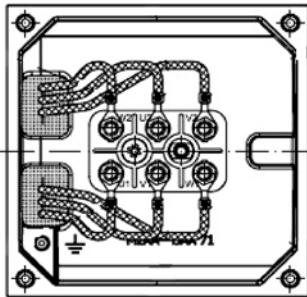

The motors can also be provided with an extra large terminal box, standard for voltage code S and frame size 280. See variant code 019 under the heading "Terminal box". This will increase the dimension HD by 32 mm. The box is supplied with two FL 21 openings. The right opening is provided with a flange with two holes for M63 cable glands. The holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange. The box can also be provided with an FL 13 opening towards the N-end.

When new motors are manufactured the terminal box can be mounted on the left or the right side. See variant codes 021 and 180 under the heading "Terminal box".

Permissible loadings on the shaft end

The following tables give the permissible radial and axial forces in Newton, assuming only radial or axial force is applied. Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to ISO 281:1990/Amd 2:2000 standard theory, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table below.

The values are based on normal conditions at 50 Hz. At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed.

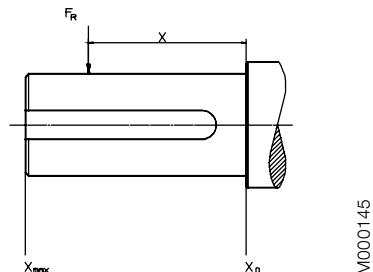

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt drive applications.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X_0} - \frac{X}{E} (F_{X_0} - F_{X_{max}})$$

E = length of shaft extension in basic version

Cast iron motors, sizes 80 to 132

¹⁾ The maximum lifetime of the grease is 38 000 h

²⁾ The maximum lifetime of the grease is 27 000 h

³⁾ The maximum lifetime of the grease is 23 000 h

⁴⁾ The maximum lifetime of the grease is 16 000 h

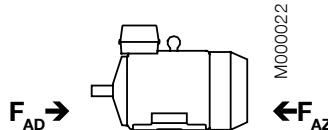

Permissible axial forces according to L₁₀ principle

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing lives of 20,000 and 40,000 hours.

At 60 Hz the values are to be reduced by 10%.

For two-speed motors, the values are to be based on the higher speed. The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces FAD, assumes D-bearing locked by means of locking ring. Without locking ring the FAD forces should be reduced to 70% of list value.

Aluminum motors, motor sizes 63 - 280

¹⁾ The maximum lifetime of the grease is 38 000 h.

²⁾ The maximum lifetime of the grease is 27 000 h.

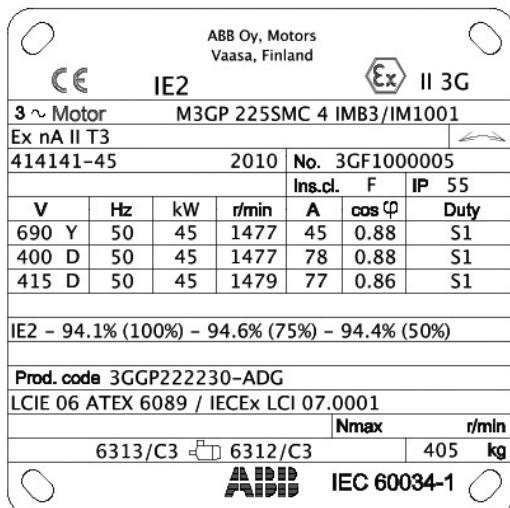

³⁾ The maximum lifetime of the grease is 23 000 h.

⁴⁾ The maximum lifetime of the grease is 16 000 h.

Rating plates

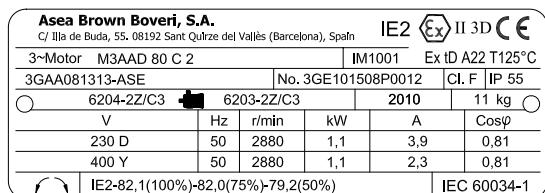

The rating plates are in table form giving values for speed, current and power factor for three voltages for cast iron motors : 400V-415V-690V as standard. For aluminum motors there are one or 2 voltages in use ; 230V-400V depending on the frame size. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

Cast iron motors

M0000736

Aluminum motors, sizes 63-80

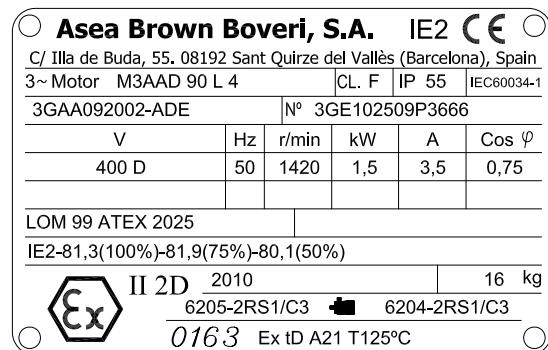

M0000702

The following information will be shown on the motor rating plate according to IEC 60034-30:2008:

- Lowest nominal efficiency at 100%, 75% and 50% rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number : for cast iron motors both ATEX and IECEx are stamped on the rating plate as standard. For aluminum motors self certification.

Aluminum motors, sizes 90-132

M0000703

Ordering information

Sample order

When placing an order, please state the following minimum data in the order, as in example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3GP 160 MLA
Pole number	2
Mounting arrangement (IM code)	IM B3 (IM 1001)
Rated output	11 kW
Product code	3GGP161410-ADH
Variant codes if needed	

Motor size

A	B	C	D.E.F.	G
M3GP 160 MLA 3GGP 161 410 - A D H 002 etc.				
			1 2 3 4 5 6 7 8 9 10 11 12 13 14	
A Motor type	C Product code	E Voltage and frequency code		G Variant codes
B Motor size	D Mounting arrangement code	F Generation code		

Explanation of the product code:

Positions 1 to 4

3GGP = Totally enclosed fan cooled squirrel cage motor with cast iron frame, dust ignition proof

3GAA = Totally enclosed fan cooled squirrel cage motor with aluminum frame, dust ignition proof

Positions 5 and 6

IEC-frame

06 = 63	20 = 200
07 = 71	22 = 225
08 = 80	25 = 250
09 = 90	28 = 280
10 = 100	31 = 315
11 = 112	35 = 355
13 = 132	40 = 400
16 = 160	
18 = 180	

Position 7

Speed (Pole pairs)

1 = 2 poles
2 = 4 poles
3 = 6 poles
4 = 8 poles
5 = 10 poles

Position 8 to 10

Serial number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted, top-mounted terminal box
R = Foot-mounted, terminal box RHS seen from D-end
L = Foot-mounted, terminal box LHS seen from D-end
B = Flange-mounted, large flange
C = Flange-mounted, small flange (sizes 71 to 112)
H = Foot- and flange-mounted, terminal box top-mounted
J = Foot- and flange-mounted, small flange with tapped holes
S = Foot- and flange-mounted, terminal box RHS seen from D-end
T = Foot- and flange-mounted, terminal box LHS seen from D-end
V = Flange-mounted, special flange
F = Foot- and flange-mounted. Special flange

Position 13

Voltage and frequency

Single-speed motors

B 380 VΔ 50 Hz
D 400 VΔ, 415 VΔ, 690 VY 50 Hz
E 500 VΔ 50 Hz
F 500 VY 50 Hz
S 230 VΔ, 400 VY, 415 VY 50 Hz
T 660 VΔ 50 Hz
U 690 VΔ 50 Hz
X Other rated voltage, connection or frequency, 690 V maximum

Position 14

Generation code

G, H...

The product code must be, if needed, followed by variant codes.

Dust ignition proof cast iron motors

Technical data for Category 2 D - T = 125°C - IP 65

¹⁾ Efficiency class IE1

²⁾ 3dB(A) sound pressure level reduction with unidirectional fan construction.
Direction of rotation must be stated when ordering, see variant codes 044 and 045

³⁾ Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁴⁾ For 400-415 V 50 Hz (380 V 50 Hz voltage code B)

⁵⁾ Missing data on request

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

Dust ignition proof cast iron motors

Technical data for Category 2 D - T = 125°C - IP 65

IE2

IP 65 - IC 411 - Insulation class F, temperature rise class B

IE2 efficiency class according to IEC 60034-30; 2008

1) Missing data on request

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current
 T_i / T_N = Locked rotor torque
 T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

Dust ignition proof aluminum motors

¹⁾ Efficiency class IE1

²⁾ 3dB(A) sound pressure level reduction with unidirectional fan construction.

Direction of rotation must be stated when ordering, see variant codes 044 and 045

³⁾ Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045

⁴⁾ For 400-415 V 50 Hz (380 V 50 Hz voltage code B)

Missing data on request

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

Dust ignition proof cast iron motors

¹⁾ Missing data on request

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current
 T_I / T_N = Locked rotor torque
 T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

¹⁾ Temperature rise class F

²⁾ Efficiency class IE1

The two bullets in the product code indicate choice of mounting arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

¹⁾ Temperature rise class F

²⁾ Efficiency class IE1

The two bullets in the product code indicate choice of mounting

arrangements, voltage and frequency code (see ordering information page).

I_s / I_N = Starting current

T_I / T_N = Locked rotor torque

T_b / T_N = Pull-out torque

Efficiency values are given according to IEC 60034-2-1; 2007. Please note that the values are not comparable without knowing the testing method. ABB has calculated the efficiency values according to indirect method, stray load losses (additional losses) determined from measuring.

Dust ignition proof aluminum motors

Technical data for Category 3 D - T = 125°C - IP 55

IP 55 - IC 411 - Insulation class F, temperature rise class B

ABB

EC Declaration of Conformity

The Manufacturer: ABB Oy
Motors
P.O. Box 633
Strömbärgin puistotie 5A
FIN - 65101 Vaasa, Finland

hereby declares that

the products: 3-phase induction motors, series M2GP, M3JP, M3JC, M3KP, M3KC, M3GP, M3HP and M3LP; as listed on page 2 in this document, fulfill provisions of the relevant Council Directives:

Directive 94/9/EC (ATEX of 23rd March 1994)

by applying the following harmonized standards:

EN 60079-0 (2006), EN 60079-1 (2007), EN 60079-7 (2007), EN 60079-15 (2005), EN 61241-0 (2006), EN 61241-1 (2004).

ABB Oy Motors declare on it's sole responsibility,

- that the state of the art of these standards do not modify the result of the assessment carried out by LCIE which issued the EC type examination certificates according to former editions of the standard series.
- that listed motors conform to the requirements of annex II of the directive 94/9/EC clause 1.2.7 by applying the standards serie EN 60034.

Directive 2005/32/EC (EuP of 6th July 2005)

by fulfilling the requirements of the standard EN 60034-30 (March 2009) in respect of the efficiency class.

Note: When installing motors for converter supply applications additional requirements must be respected regarding the motor as well as the installation, as described in the appropriate dedicated addendum.

Dust ignition proof cast iron motors in brief, basic design – 2D

Motor size		80	90	100	112	132	160	180
Stator	Material	Cast iron, at least EN-GJL-200						
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Bearing end shields	Material	Cast iron, at least EN-GJL-200						
	Paint color shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Bearings	D-end	2-pole	6205-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C3	6208-2Z/C3	6309/C3
		4-8 -pole						
	N-end	2-pole	6204-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C3	6208-2Z/C3	6309/C3
		4-8 -pole						6309/C3
Axially-locked bearings	Inner bearing cover	As standard, locked at D-end						
Bearing seal		Gamma ring						
Lubrication		Permanent grease lubrication.					Regreasable bearings	
SPM-nipples		–					As standard	
Rating plate	Material	Stainless steel						
Terminal box	Frame material	Cast iron, at least EN-GJL-200						
	Cover material	Cast iron, at least EN-GJL-200						
	Screws	Steel 8.8, zinc electroplated and chromated.						
Connections	Cable entries	2xM25x1.5		2xM32x1.5			2xM40x1.5	
	Terminals	6 terminals for connection with cable lugs (not included)						
Fan	Material	Aluminum					Polypropylene. Reinforced with glass fibre.	
Fan cover	Material	Steel					Hot dip galvanized steel	
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822 B05G						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Stator winding	Material	Copper						
	Insulation	Insulation class F						
	Winding protection	3 pcs thermistors						
Rotor winding	Material	Pressure die-cast aluminum						
Balancing method		Half key balancing						
Key ways		Open key-way						
Heating elements	On request	25 W						
Drain holes		Optional					As standard, open on delivery	
External earthing bolt		As standard						
Enclosure		IP 55						
Cooling method		IC 411

Fan cover	Material	Steel.			
Stator winding	Material	Copper.			
	Impregnation	Polyester vanish. Tropicalised.			
	Insulation class	Insulation class F.			
	Winding protection	PTC-thermistors, 150°C			
Rotor winding	Material	Die-cast aluminum.			
Balancing method		Half key balancing.			
Key ways		Closed key way.			
Heating elements		25 W			
Drain holes		Not included, drain holes sealed on delivery.			
External earthing bolt		As standard.			
Enclosure		IP 65.			
Cooling method		IC 411.			

Dust ignition proof aluminum motors in brief, basic design – 2D

Motor size		160	180	200	225	250	280
Stator	Material	Diecast aluminum alloy.		Extruded aluminum alloy.			
	Paint colour shade	Munsell blue 8B 4.5/3.25 / NCS 4822 B05G					
	Surface treatment	Polyester powder paint ≥ 50 µm.					
Feet	Material	Aluminum alloy, integrated with stator.		Aluminum alloy, bolted to the stator. Frame size 250, 2-pole, cast iron.		Cast iron	
Bearing end shields	Material	Cast iron					
	Paint colour shade	Munsell blue 8B 4.5/3.25 / NCS 4822 B05G					
	Surface treatment	Polyester powder paint ≥ 50 µm.					
Bearings	D-end	2-pole	6309-2Z/C3	6310-2Z/C3	6312-2Z/C3	6313-2Z/C3	6315-2Z/C3
		4-8 -pole					6316-2Z/C3
	N-end	2-pole	6209-2Z/C3	6209-2Z/C3	6210-2Z/C3	6212-2Z/C3	6213-2Z/C3
		4-8 -pole					6213-2Z/C3
Axially-locked bearings	Inner bearing cover	D-end					
Bearing seal	D-end	V-ring.		Outer and inner V-rings.			
	N-end	Labyrinth seal.		Outer and inner V-rings.			
Lubrication		Permanently lubricated shielded bearings.				Valve lubrication.	
Terminal box	Material	Die-cast aluminum alloy. Base integrated with stator.		Deep-drawn steel sheet, bolted to stator.			
	Surface treatment	Similar to stator.		Phosphated. Polyester paint.			
	Screws	Steel 8.8, zinc electroplated					
Connections	Knock-out openings	2 x (2 x M40) + M16				2 x FL21	
	Flange-openings			2 x FL 13.2 x M40		2 x M63	
	Flange-openings			2 x FL 21.2 x M63 (voltage code S)		1 X M16	
	Terminal box	Cable lugs. 6 terminals.					
	Screws	M6	M10				
	Max Cu-area, mm ²	35	70				
Fan	Material	Polypropylene. Reinforced with 20% glass fibre.					
Fan cover	Material	Steel sheet. Galvanized.					
Stator winding	Material	Copper.					
	Impregnation	Polyester varnish.					
	Insulation class	Insulation class F. Temperature rise class B, unless otherwise stated.					
Stator winding temperature sensors		Optional. PTC-thermistors, 150°C					
Rotor winding		Die-cast aluminum.					
Balancing method		Half key balancing.					
Key ways		Closed keyway.					
Heating elements		25 W	50 W				
Drain holes		Drain holes with closable plastic plugs. Closed on delivery.					
Enclosure		IP 55.					
Cooling method		IC 411.

ABB High voltage motor's product offer for explosive atmospheres

Flameproof motors

Type of protection: Ex d IIB/IIC T4, Ex de, IIB/IIC T4

Features: LV-11kV, 50/60 Hz, 2-18 poles, VSD applications, IP55, IC411, IC511, Horizontal or Vertical

Motor type	IEC frame size	Output kW
Ribs cooled	355 - 500	150 - 1250 kW
Tubes cooled	500 - 710	800 - 4500 kW

Pressurised motors

Type of protection: Ex px, Ex pxe; Temperature classes T1-T4, Gas groups A, B and C

Features: 50/60 Hz, 2-24 poles, VSD applications, acc. to ATEX Directive and IEC standards

Motor type	IEC frame size	Output kW
Induction motors	355 - 1120	up to 23 MW (31000 HP)
Synchronous motors	710 - 2500	up to 55 MW (74000 HP)

Increased safety motors

Type of protection: Ex e, Temperature classes T1-T3, Gas groups A, B and C

Features: 50/60 Hz, 2-24 poles, VSD applications, acc. to ATEX Directive and IEC Standards

Motor type	IEC frame size	Output kW
Induction motors	355 - 1120	up to 10 MW (13410 HP)

Non-sparking motors

Type of protection: Ex nA, T1-T4, Gas groups A,B and C

Features: 50/60 Hz, 2-24 poles, VSD applications, acc. to ATEX Directive and IEC Standards, CSA/US certified

Motor type	IEC frame size	Output kW
Induction motors	315 - 1120	up to 23 MW (31000 HP)
Synchronous motors	710 - 2500	up to 55 MW (74000 HP)

Motors for North America (NEC and CEC)

Type of protection: Class I Division 2, Class I Zone 2, Class II Division 2, Class III; T1-T4

Features: 50/60 Hz, 2-24 poles, VSD applications, designed for North American markets, CSA/US-certified

Motor type	IEC frame size	Output kW
Induction motors	315 - 1120	up to 23 MW (31000 HP)
Synchronous motors	710 - 2500	up to 55 MW (74000 HP)

**More information for these motors
can be found from web-pages:
www.abb.com/motors&generators**

Total product offer of ABB motors and generators

ABB manufacturers a comprehensive range of reliable and high efficiency motors and generators. We offer AC and DC motors, as well as synchronous motors and generators along with a complete portfolio of services. Our in-depth knowledge of virtually every type of industrial process ensures we can always specify the best solution for your needs.

Low voltage motors

- Process performance motors
- Industrial performance motors
- General performance motors

High voltage induction motors

- High voltage cast iron motors
- Induction modular motors
- Slip-ring modular motors

Motors and generators for explosive atmospheres

- Flameproof
- Increased safety
- Non-sparking
- Pressurized
- Dust ignition proof

Marine motors and generators

Synchronous motors

Generators

- Synchronous generators for diesel and gas engines
- Synchronous generators for steam and gas turbines
- Wind turbine generators

DC motors

Traction motors and generators

- High power traction motors
- Medium power traction motors
- Traction generators

Motors for other applications

- Low voltage open drip proof motors
- Low voltage brake motors
- Low voltage single phase motors
- Low voltage high ambient motors
- Permanent magnet motors and generators
- High speed motors
- Low voltage smoke venting motors
- Low voltage water cooled motors
- Motors for roller table drives
- Servo motors

Motors and Generators

ABB offers a comprehensive range of reliable and high efficiency motors and generators for all applications.

ABB have what it takes to help every industry and application reach new levels of efficiency and energy savings even under the most demanding conditions. Combining the best available materials with superior technology, the motors are designed to operate reliably no matter how challenging the process or application, and to have a low lifecycle cost.

ABB launches high speed permanent magnet generator series for 1.5 - 3.6 MW full converter concept!

ABB launches new standard slip ring wind power generator series for the doubly-fed 1.5 - 2 MW turbines

Our offering

	Low Voltage Motors		High Voltage Induction Motors
	Motors and Generators for Hazardous Areas		DC Motors
	Synchronous Generators		Wind Turbine Generators
	Synchronous Motors		Traction Motors

Motors for hazardous areas

ABB offers a wide range of low and high voltage motors for all protection types, certified according to all major standards.

Low voltage motors fulfill IEC efficiency class requirements.

Our offering

	Flameproof Motors		Pressurised Motors
	For zones 1 and 2		For zones 1 and 2
	Increased Safety Motors		Non Sparking Motors
	Dust Ignition Proof Motors		For zone 2

General

Certificate for Ex workshops	Hazardous environment
International standards	Gas protection
Certificates	Dust ignition protection

News

- ABB is first motor manufacturer to receive iECEx Conformity Mark License
- ABB participate in DETEX-2009
- ABB has signed standard comments and deviations with Engineers India Limited (EIL)
- Risk assessment
- Moving ahead with global certification

Low voltage flameproof motors

[Overview](#) [Tools](#) [Contacts](#)

ABB Flameproof motors fulfill the IEC efficiency class according to IEC 60034-30, 2008 and EPAct requirements.

Type of protection: Ex d / Ex de - read more

Output power 0.55 to 630 kW
Frame size 40 to 400
Number of poles 2 to 8
Voltages All commonly used voltages
Frequency 50 or 60 Hz
Protection IP 55
Protection type For zone 1 or 2
Temperature classes T1 - T4
Certificates According to ATEX Directive and IEC standards GOST (Russia)
Features

- IVD applicable as standard
- Variants for different standards in the oil and gas sector, such as Norsk and Shell, as well as for VK
- Marine use and open deck with most classification societies
